

New Airtex
Textile therapeutic supports
for the recovery of acute injuries
and for active people.

airtex

feel alive
100% active

Acute injuries occur suddenly and are associated with exercise or sports practice, but simple activities of daily life can also cause injury: sprains, strains, dislocations, muscle ruptures, bone fractures.

Early treatment through mobilisation and functional rehabilitation, with the help of orthoses, provides great benefits in joint movement, in terms of pain, functionality, and return to activities of daily living.

Textile therapeutic supports for the recovery of acute injuries and for active people.

New
airtex

Maximum breathability, lightweight and comfortable for the joint and the injured area.

Compression and support in the affected area.

Dynamically secures the joint without immobilising or reducing its functionality, helping to improve the treatment.

*feel alive
100% active*

New
airtex

Renewed line of high-end supports
for the recovery of different joint
and muscle injuries.

**maximum
breathability,
lightweight and
comfortable.**

New

airtex

FST Friendly Skin Tech

innovative
seamless
design.
all-round comfort

The new AIRTEX line has been designed with **Friendly Skin Technology**, bonding technology **that allows us to join the different pieces of the support without the need for seams**, creating a more technical, modern and ecologically efficient product due to the elimination of thread waste.

The absence of thread and seams significantly reduces chafing on the skin, enhancing comfort for the user.

New
airtex

three-layer fabric.
lightweight and flexible

Bonding technology allows us to manufacture orthoses using state-of-the-art materials to create more flexible and lightweight products that offer excellent compression properties and a natural fit to the joint or injured area.

Compressive Lycra top layer

decorated with embossing technology, combined with soft-to-the-touch velour with superb adhesion properties.

Highly adaptable lightweight foam middle layer

that provides excellent compression.

Soft-to-the-touch compressive Lycra layer

in contact with the skin.

airtex

100%
active breathability

Its fabrics are designed to ensure adequate ventilation by actively helping to remove heat and sweat.

Your skin feels healthy, fresh and comfortable.

airtex

atx OS205
Epicondylitis strap

Symmetrical design for comfort and fit.
For epicondylitis and epitrochleitis.
Simple to adjust.

With a **PVC core** to provide consistency and improve arm stability.

Repositionable anatomical silicone pad for tendon relief.

Indications:
Treatment of epicondylitis (tennis elbow) or epitrochleitis (golfer's elbow).

airtex

atx OS700 knee support

With **4 spiral stays** to improve the mediolateral control of the knee while allowing flexion movement.

Anatomical patellar pad to maintain patellar stability during use.

Two fastening straps that can be **individually adjusted to regulate compression** while leaving the popliteal fossa area free.

With a **hypoallergenic non-slip system**, to stop the support from slipping.

Indications:

Minor instability of collateral ligaments, patellofemoral instability, congenital or acquired instabilities. Joint pain and inflammation associated with osteoarthritis, arthritis and tendonitis. Post-surgical knee treatment, rehabilitation processes.
