

OTIDRY-MD[®]

ear spray

Otidry-MD[®] is a solution addressed to prevent acute otitis externa (also known as “Swimmer’s ear”), a very prevalent condition that results in millions of health care visits and expenses in ototopical medications.

PROBLEM

Acute Otitis Externa (also known as “swimmer’s ear”) is a diffuse inflammation of the external ear canal, which may also involve the auricle or the tympanic membrane. Symptoms may include acute pain, itching, fever, discharge, etc. The most common cause of infection is excess moisture trapped in the external ear canal of showers, swimming, baths in the pool or hot springs and wet climates.

Other causes predisposing are excessive ear cleaning with inappropriate elements that generate local trauma and injuries due to scratching. Also changes in skin pH by washing with soapy water or using alkaline drops. Nearly all cases of Acute Otitis Externa are bacterial.

SOLUTION

Otidry-MD[®] ear spray has a triple action in the ear canal:

- 1) Evaporates excess water
- 2) Recovers the physiological pH
- 3) Protects the skin that covers it

RESULTS

Otidry-MD[®] ear spray provides the ideal conditions to prevent the proliferation of bacteria that can cause otitis externa, that is, prevents infections of the ear canal.

“My son has had two ear infections this summer and thanks to the spray he hasn't had any again. I have tried it too and it works great. I recommend it.” Cristina P. upon online purchase at AMAZON.COM on 27/07/2022. Verified opinion by Amazon.

30 ml 30°C
