

# flashdent

Flashdent® are mouth-watering, sugar-free lozenges with lasting effect that relieve the symptoms of dry mouth and help teeth stay healthy with vigorous saliva secretion.

## PROBLEM

Dry mouth, typically called “xerostomia”, is a common symptom most often caused by an absence or decrease in the amount or quality of saliva. Dry mouth is very often caused by common medications as a side effect (drugs for high blood pressure, diuretics, antidepressants, antihistamines, decongestants...) or by chronic conditions (Sjögren’s syndrome, HIV, diabetes, etc).

Symptoms of dry mouth can include:

- Difficulty swallowing food (especially dry food) without a drink.
- Change in the sense of taste.
- Burning sensation or pain in the mouth.
- Difficulty talking or eating certain foods.
- Excessive thirst, especially at night.

## SOLUTION

Flashdent® lozenges are a sugar-free source of xylitol, fluoride and tartaric acid that produce a powerful stimulation of saliva secretion.

## RESULTS

Enhance the flow of saliva and the hydration of the oral mucosa. Moreover, three lozenges a day help reduce plaque formation and enhance teeth remineralisation.

*“Recommended saliva-stimulating tablets by the dentist due to dry mucous membranes. The tablets taste good and are useful.” - Christer; verified opinion by TestFreaks.*
