PATIENT MONITORING TOOLS

Attention-deficit/hyperactivity disorder (ADHD)

Bioequivalence curve - after meal*

"DATER" Diagram – CADDRA

The "DATER" diagram is a tool from CADDRA - Canadian ADHD Resource Alliance assisting the evaluation of a treatment for ADHD. It will contribute, through its methodology, to confirm that the treatment is appropriate for the patient.

Table 5.9 Facts to Consider Prior to Making Medication Changes

D	Dosage - Has the medication been tried on a high enough dose, is the duration of effect adequate? Side effects: Is the dosage too low or too high?
A	All - Have all medications within the higher line(s) of treatment (when clinically indicated and reasonable) been attempted? If not, explore why.
T	Time - Has enough time been given to examine patient response and for side effects to resolve?
E	Examine - Has the patient-doctor team determined specific targets for treatment and means to measure changes? Select standardized measures to examine response and plan examination of response from many perspectives (e.g., teacher, parent, spouse and self-report).
R	Review - Has the diagnostic process reviewed potential comorbidity, psychosocial complications and lifestyle issues?
