## Who we are

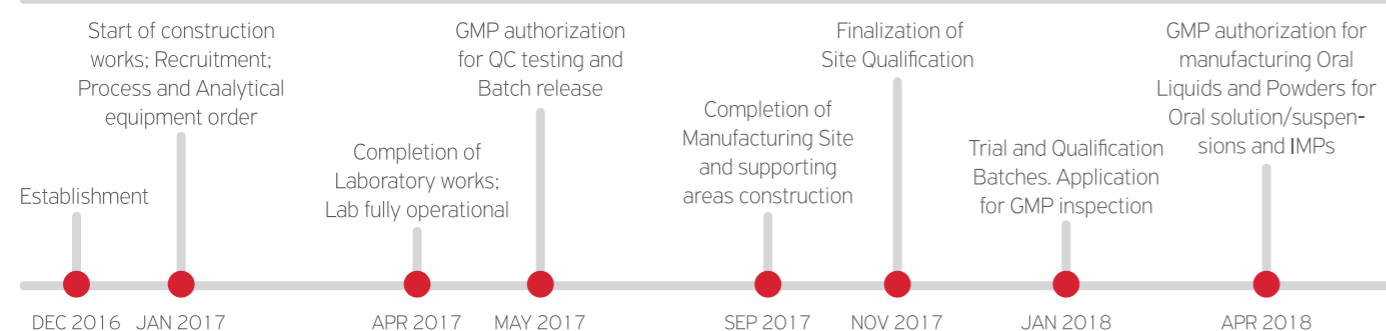

Laboserve is a privately owned CMO service provider (Contract Manufacturing Organization) focused on pharmaceutical services of generic and added-value finished products for oral liquid dosage forms. Although we are a recently established firm (December 2016), we represent a joint venture and combination of forces and specialties of pharma executives with high calibre credentials in the development, manufacturing and commercialization of healthcare products, within EU but also around the globe. Laboserve has already accumulated significant know-hows, intellectual property and projects that intended for commercialization and contract manufacturing, mainly through out-licensing and supply models.

## Our Vision - Our Mission

We work hard and aim to provide new innovative pharmaceutical molecules / solutions / life-changing therapies to improve health conditions and quality of life for all. We constantly assist our partners, sponsors and clients to deliver a better and healthier future to the world, with exceptional level of customer service and support, with a passion and a drive for innovative product and process development for the life sciences, offering cutting edge ideas, in a cost-effective and time-efficient approach based on the highest scientific, humanitarian and environmental standards currently available.

## Birth of a Company

## Added Value Products

The Value added medicines can also be defined as "Medicines based on known molecules that address healthcare needs and deliver relevant improvements for patients, healthcare professionals and /or payers". The value added to a known medicine could be any of the following:

- Improved levels of safety, efficacy and/or tolerability.
- Treatment for new indications or patient sub-populations.
- Improved treatment administration.

**Drug repurposing:** Includes all the re-development strategies.

**Drug reformulation:** Reformulation is, by the simple definition of the term, making a particular change in the formulation of the original drug.

### Drug re-profiling / Drug reusing / Drug rediscovery:

The usage of known drugs for new diseases. Drug repositioning: Process of finding a new indication for a drug or compound (Repositioning goes a step further for generics by creating a stronger product even through the addition of a new indication).\*

### \* Drug repositioning allows companies:

- To find a non yet exploited or used value of their medicinal products.
- To differentiate them against generics.
- To create OTC opportunities and
- To protect them against competitors.
