Wart away

Warts

A wart is generally a small, rough, harmless tumor, typically occurring on hands and feet but often other locations. It can resemble a cauliflower or a solid blister. Warts are caused by infection of the epidermis with human papilloma virus (HPV). Warts are spread by contact, either directly from person to person, or indirectly via fomite left on surfaces. Infection via the environment is more likely to occur if the skin is macerated and in contact with roughened surfaces, conditions which are common in swimming pools and communal washing areas.

The Solution

Wart Away is a medical device for the treatment of common warts on hands and feet. Wart Away is a caustic solution intended to be topically applied to the surface of a wart, to necrose the wart. In a week time it will dissolve the top layer of the wart. It is based on Monochloroacetic acid (50%) as the active ingredient. Only a small amount of Wart Away is dabbed onto the wart.

Monochloroacetic acid hydrolyses proteins, initiating an inflammatory process and resulting in the destruction of cells. Monochloroacetic acid ensures that any cells containing viruses are destroyed, which then means that the virus becomes more fully exposed to the immune system, triggering a greater immune response.

Claims

One benefit of using Wart Away is that dabbing the wart does not hurt, which means that it can also be used for children.

- Suitable for children from the age of 4
- For the treatment of common warts on hands and feet
- Only 1 treatment per week
- Painless treatment
- Easy and simple to use

Mechanism of action

The mode of action of Wart Away is associated with keratolytic and cauterizing properties of Monochloroacetic acid. It acts as keratolytic and cauterizing agent by physically destroying the keratin layer, warts and other lesions in which the epidermis produces excess skin. Also Monochloroacetic acid has a coagulant action causing necrosis (premature death of cells and living tissue) of the wart. Its cauterizing effect is comparable to that obtained with such methods as electrocautery or freezing.

USP's

- Easy applicable and suitable for children from the age of 4
- Painless treatment for warts on hands and feet
- Only 1 treatment per week

Instructions for use

Use Wart Away only once per week. After a week, the wart will dissolve, layer after layer. After some time the wart cells are destroyed and the wart will get a white colour and will be rejected. Depending on the size and thickness of the wart, it may be necessary to repeat the treatment with Wart Away after one week.

Composition Liquid:

50% monochloroacetic acid, 50% purified water.

Product information:

- Lucovital® Wart Away Liquid
- Outer box
 - Instructions for use
 - 4 ml bottle

Medical device for the treatment of warts on hands and feet. Only one painless treatment.
