

# Dry mouth spray

## Dry mouth (xerostomia)

A dry mouth is caused by a shortage of saliva in your mouth. Complaints may occur when there is a lack of saliva because saliva plays an important role in our mouth. You often have problems speaking, swallowing, with tasting and with wearing a prosthetic device when suffering from xerostomia. The tongue and mucous membrane of the mouth will become irritated when a burning feeling may occur. You will also be more prone to develop cavities and gum disease.

## Consequences of a dry mouth

Having a dry mouth will occur even more often when growing older. Usually, this is related to medication use, which is another important cause of dry mouth. More than 400 medicines have an influence including beta blockers for heart and vascular diseases and high blood pressure, sleeping pills, anti-anxiety medication, antidepressants, diuretics and antipsychotic drugs. Sjogren's syndrome may also lead to dry mouth complaints. In addition, an incorrect diet (beverages and food), excessive alcohol consumption, smoking, cannabis and coffee may be the cause of a dry mouth. Dry mouth spray will ensure that your mouth is kept moist for longer, it works immediately and is also suitable for people suffering from diabetes and older people. You will also avoid bad breath by using Dry mouth spray.

## The solution

Dry mouth spray has been especially developed for the treatment of dry mouth (xerostomia). Dry mouth spray is a mild spray that keeps the mouth moist and places a protective layer on the mucous membrane of the mouth when there is a lack of saliva. In addition, it will stimulate saliva production. Using Dry mouth spray will also reduce bad breath and taste. Continuous humidification of the mouth with Dry mouth spray spray will reduce the probability of tooth decay and other tooth complaints.

## Claims

- To treat dry mouth syndrome (xerostomia)
- Alleviates symptoms when suffering of dry mouth complaints
- Protects mouth tissue against small irritations and a burning feeling
- Gives a fresh feeling in your mouth and reduces bad breath or taste
- To reduce the feeling of having a dry mouth and to make speaking and swallowing easier

## Mechanism of action

The mechanism of action of Dry mouth spray is based on replacement of natural saliva with a saliva substitute and stimulation. The active ingredients moisten, lubricate, provide coating on oral mucosa in absence of saliva, stimulate saliva production and decrease bacteria growth in the mouth.

## The unique triple-action formula

- Moistens the mouth
- Provides a protective layer
- Stimulates the production of saliva

## USP's

- Class I medical device stops dryness in the mouth and painful swallowing because of taking medication
- Prevents bad breath
- Has an immediate effect, without alcohol and is suitable for diabetics and older people
