Fungal Nails

Fungal nail infection

Fungal nail infection, also known as Onychomycosis is a chronic fungal infection of the toenails or fingernails. It is a relatively common disease and usually not a serious condition, but it can be unpleasant and unattractive. Fungal nails are thickened, brittle, crumbly or ragged, distorted in shape, dull, with no shine, can be painful and can have a slightly foul odor.

What causes Fungal nail infection?

Fungi are normally present in and on the body. When fungus begins to overgrow a nail infection can develop. Most commonly, the fungus invades the nail and nail bed by penetrating at the sides of the nails. In other cases, it invades the nail plate directly from above, resulting in a powdery, white, patchy discoloration of the nail surface. Fungi thrive in warm, moist environments. The prevalence of fungal nail infections rises with age. Other risk factors are:

- Spread from a fungal skin infection such as athlete's foot and ringworm;
- An illness or medications that suppress the immune system;
- Diabetes mellitus;
- Living in a warm, humid climate;
- Participation in athletic/sporting activities, regular communal bathing and occlusive footwear;
- A recently damaged nail.

The solution

Lucovital® Fungal Nail Treatment is a medical device for the treatment of fungal nail infection (Onychomycosis). It is a unique formula which contains an "instant killer". This unique mix of active ingredients penetrates into the nail surface and kills the fungi on the nail surface within 20 seconds! Thanks to this 20 seconds instant kill formulation, contamination of other nails will be prevented and it protects against recurrence, as the brush will not be infected with the fungi. Apply on the fungal nail twice a day with the easy to use brush. To receive faster and better results it is recommended to cover the fungal nail with a plaster. Achieve beautiful and healthy looking nails within a very short time period!

Once the treatment will be stopped, the fungal nail will come back faster. It is therefore very important to keep using Lucovital® Fungal Nail Treatment gel. To achieve good results the best treatment method is to use it for 3 months:

- First month daily
- Second month every other day
- Third month every other week

Lucovital® Fungal Nail Treatment gel is easy to apply and it is not needed to file the nails. As one of the causes of fungal nail infections is a moist environment, it is highly recommended to always wear socks of absorbent and natural material such as cotton or wool. Socks made of these natural materials absorb more moisture. This is very important as fungi like high moisture environments so they can multiply. When suffering of fungal nail, it is important to keep feet dry.

Ingredients treatment gel

Aqua, Ethoxydiglycol, Urea, Pentylene Glycol, Alcohol Denat., Tridiceth-9, PEG-40, Hydrogenated Castor Oil, Benzyl Alcohol, Melaleuca Alternifolia Leaf Oil, Limonene, Glycerin, Natilact, Propylene Glycol, PVP, Xanthan Gum, Eucalyptus Globulus Leaf Oil, Lavandula Hybrida Oil, Lactic Acid, Linalool, Dimethyl Isosorbide, Citrus Aurantium Dulcis Oil, Pogostemon Cablin Oil, Disodium Phosphate, Geraniol, Citral, Biotin, Coumarin, Citric Acid, Famesol.

Mechanism of action

Thanks to a combination of ingredients, Lucovital® Fungal Nails forms a layer that creates an unfavourable environment for the development of fungi in the plate of the nail. It functions as a physical barrier that prevents the spreading of fungi. Urea allows the active ingredients to penetrate deep into the nail plate. The gel reduces the acidity of the nail, creating an unfavourable environment, in which the fungi can no longer grow and spread. In addition, studies show that tea tree oil inhibits the development of hyphal threads.

Claim

To treat fungal nails (Onychomycosis) on hands and feet.

USP's

- Kills fungi on the nail surface within 20 seconds!
- Prevents contamination of other nails and protects against recurrence!
- Easy to apply, makes it possible to use nail polish over the fungal nail!

Dosage

Two steps:

- Apply the gel on the affected nail twice a day.
- When using nail polish, it is required to remove it with a special nail polish remover or acetone.

Product information:

- Lucovital® Fungal Nails
- Outer box
- Instructions for use
- Bottle with brush 5 or 10 ml

Treat fungal nails and have healthy nails at the same time!
