

ntc

Novelty. Technology. Care.

NTC is focused on developing pharmaceutical **Novelty** through innovative thinking and leveraging **Technology**, because we **Care** about people, aiming at a global reach.

Novelty

Novelty at **NTC** stands for being different, new and unusual.

Novelty comes from the never ending observation and listening of our clients and patients.

Our projects focus on helping to resolve unmet medical needs and open therapeutical issues in ophthalmology and in other therapeutical areas where we operate.

Technology

Technology at **NTC** reads both products and market approach.

We are investing significantly in developing new therapeutical solutions for our clients, building both on internal research as well as on acquisitions of new products and technologies from third parties.

Patients and their needs are at the centre of our thoughts and technology supports this focus.

Care

We **Care** about patients, partners and people.

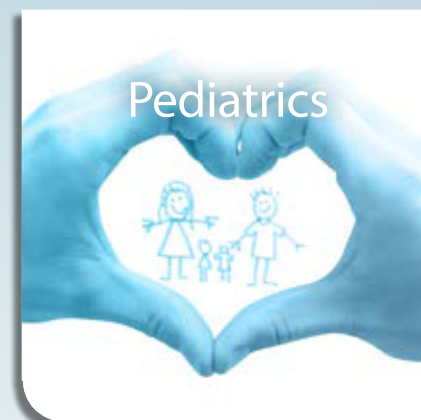

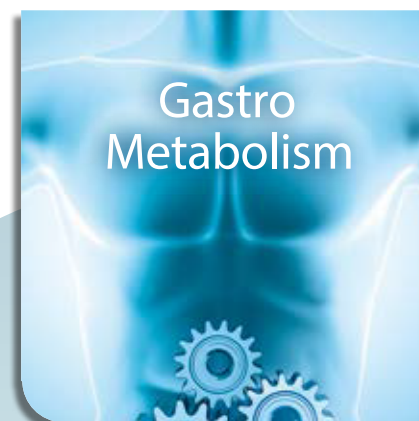

NTC believes that focusing on care means to create value for the people we are connected with, and means to move to higher standards of leadership, internally and externally.

Caring is to create connections with people to understand their needs.

Partnering

NTC is building a fresh model of partnership designed to provide solutions to increase the potential and the value of the relationship and to add mutual and competitive advantages both for us and our partners.

Therapeutical solutions

NTC started an Innovation Project engaging Top Kols, targeted to highlight unmet medical needs and unresolved problems in Ophthalmology, Gastro-Metabolism, Pediatrics, Women Health and resolve them with innovative therapeutical solution to close the gap and to help solving some of them.

Ophthalmology

NTC has an established reputation for innovation in the Ophthalmology therapeutical area.

NTC is focused in research and development: we have more than 30 development projects in Ophthalmology, 10 of which are pharmaceutical products.

NTC ophthalmology experience includes a wide range of products for eye health in single-dose, multidose, preservative free formulations suitable also for contact lenses' wearers.

The combination between
a quinolone and a corticosteroid
for post-cataract surgery
