

WeylChem
InnoTec

Innovating Chemistry.
Together.

We are WeylChem InnoTec!

We at WeylChem InnoTec are the innovative partner to the fine chemical, pharmaceutical and electronic industry. We provide world-class analytical, modern developmental and tailor-made manufacturing services.

With our competencies in Analytics, Contract Development & Custom Synthesis, WeylChem InnoTec is your agile development partner.

Innovating chemistry. Together

Our objective is to bring you to the next level with innovative solutions for your challenge. We do this through our key values; customer intimacy, scientific excellence, flexibility and quality. Our business is driven by long and trustworthy partnerships with our customers. We have an impressive track record of successful customer projects.

From concept to production and quality control, more than 120 scientists and technicians, embedded in a unique flexible environment and connected to an excellent infrastructure, are dedicated to turn your ideas into reality.

Our Services

<p>Analytics</p> <p>Your service partner in the chemical and pharmaceutical industry, with contract services under GLP and GMP.</p>	<p>Contract Development</p> <p>We offer chemistry research programs, process optimization, compound & custom synthesis plus excellent scale up capacities and a fully equipped kilolab</p>
<p>Custom Synthesis</p> <p>We manufacture specialty products applying state-of-the-art multipurpose equipment with reaction volumes from 100 to 5,000 liter.</p>	<p>Advanced technologies</p> <p>For customer's projects we apply low temperature down to -100 °C and high pressure chemistry up to 200 bar.</p>

How we can support you in the different markets

Organic Electronics

- Materials for printed semiconductors and OLED's
- Materials for Organic Photovoltaic (OPV)
- Liquid crystal building blocks in high purity
- Materials for batteries
- Core competency: Efficient scale-up and process optimization
- Quality control of starting materials and products

Catalysts and Ligands

- Phosphorus-containing ligands and others
- Midsize and large commercial scale
- Metallocenes and homogeneous catalysts
- Low-temperature and organometallic chemistry
- Quality control of starting materials and products

Sustainable Chemistry

- e. bio-based or bio-degradable materials
- Process development for applications of bio-based materials
- Applicable technologies are hydrogenation, oxidation or purifications via rectification or crystallization
- Analytical support in process development

Pharmaceutical Intermediates

- Pilot and midsize plants for 10's of kg's to tons per year
- Building blocks and starting materials (strictly non GMP)
- Offering high flexibility
- Extended capacities for chemical process development in lab scale
- Advanced technologies: Low temperature and high pressure reactions
- GMP-Analytics: excipient testing release testing, stability testing, method development and validation

Agrochemicals

- Process development and optimization on laboratory and pilot scale
- Manufacturing of test and tox quantities in a range of 100's kg's to tons per campaign
- Large scale manufacturing at other WeylChem sites in Europe or the US available
- GLP-Analytics: Physico-chemical data, five batch analyses, method development and validation

Contacts for inquiries

WeylChem InnoTec GmbH
Alt-Fechenheim 34
60386 Frankfurt am Main
Germany
