

Raw materials for processes such as fermentation, harvest, purification and formulation must meet the highest standards of quality and consistency. Cell lines are highly sensitive, and unpredictable metal impurities or endotoxin levels in cell culture media raw materials can severely impact cell proliferation and function.

Dr. Paul Lohmann® is your partner for innovative product solutions for maximizing the full potential of your fermentation, downstream and fill/finish processes to achieve your unique biopharmaceutical needs.

DPL-BioPharm Salts designated for your Needs

Based on our profound experience with biopharma customers and in depth market research we have developed **DPL-BioPharm**. This quality combines a constant and high product quality including following parameters:

- ◆ Multi-compendial (e.g. Ph.Eur., BP, USP/NF)
- ◆ Bioburden (TAMC, TYMC)
- ◆ Heavy metal profile according to ICH Q3D
- ◆ Optimized for biopharmaceutical applications
- ◆ Highest purity
- ◆ Constant production processes
- ◆ Residual solvent free
- ◆ Animal component free (ACF)
- ◆ BSE/TSE free
- ◆ Non-GMO
- Customized packaging

Additionally you may profit from upgrades of the **DPL-BioPharm** grade:

- ◆ Low in Endotoxin grade
- ◆ Extended impurity profile
- ◆ Additional bioburden parameters
- Optimized solubility
- ◆ Complete customized salts
- Innovative physical and chemical product modifications

Our **DPL-BioPharm** salts fulfill your biopharmaceutical demands:

- ◆ Specially developed product specifications
- ◆ Flexible customized upgrade quality
- ◆ Reliable, constant high product quality
- ◆ Expert support in product modification
- Innovative new product development (e.g. amino acid salts)
- Cell culture and buffering blends (e.g. Phosphate and Citrate buffering blends)

Our core expertise lies both in the production and in the analysis of salts. We use an extensive arsenal of instruments to design and monitor the chemical and physical properties of our products.

Three Areas – Upstream, Downstream and Fill/Finish – one Aim

Finding the right Salt and solution for your biopharmaceutical applications

Fermentation/ Cell Culture Harvest (Centrifugation + filtration) Capture (Chromatography) Polishing (Chromatography, Filtration) Fill/Finish

Upstream

In upstream processing, salts provide essential nutrients for mammalian cells, bacteria and yeast to promote growth and API production including stimulatory and metabolic effects within the cell. Dr. Paul Lohmann® offers a broad portfolio of Salts with the targeted cell nutrients i.e. Cu, Fe, Mg, Mn, Zn, etc. with various anions to influence productivity. **DPL-BioPharm** Salts are of exceeding purity to meet the highest demands.

Downstream

In addition to the crucial role they play as an upstream additive, salts are also used as process aids. Buffers influence process robustness, yield and quality. Each biopharmaceutical production process brings its own set of unique challenges. Our outstanding expertise in product modifications will guide you through numerous options for functional optimization for your processes via our **DPL-BioPharm** Salts.

Fill/Finish

Salts and other organic and inorganic chemicals constitute fundamental excipients in the final formulation of biologics and vaccines. These excipients act as chelators, buffer and adjuvants in vaccines or stabilize the drug substance for instance. Since biologics and vaccines are administered via parenteral injection, the purity of the excipients are of utmost importance.

A new dedicated GMP certified manufacturing facility qualifies us for exclusive production of salts low in endotoxins – our full commitment to the biopharmaceutical industry. These **DPL-BioPharm** Salts minimize endotoxin contamination throughout your biopharmaceutical production.

Committed to our Customers

More than 135 years of salt development and production strengthened our outstanding expertise, turning us into a globally leading supplier of high-quality Salts. Diverse production options enable us to modify specific chemical and physical properties creating tailor-made salts for your specific requirements. Moreover, we offer the technology in providing cell culture media and buffering blends. Our consistent high quality minimizes lot-to-lot variation in your production process. Contamination, such as heavy metals are known to interfere and even inactivate your APIs (e.g. antibodies). Our defined heavy metal content control enables constant production conditions in upstream, downstream and fill/finish processes.

The information given in the document corresponds to our current knowledge. We warrant in the frame of our General Terms and Conditions of Sale that our products are manufactured in accordance with the specifications. However, we disclaim any liability with regard to the suitability of our products for a particular purpose or application or their compatibility with other substances. Tests have to be performed by the customer who also bears the risk in this respect. Nothing herein shall be construed as a recommendation to use our products in conflict with third parties' rights.

Dr. Paul Lohmann®— Your Partner for high value Mineral Salts

With over 135 years of producing Mineral Salts that meet the highest quality standards we have been established as the leading global supplier to the pharmaceutical, biopharmaceutical, nutritional supplement, food and personal care industries.

Our Expertise

- ◆ GMP and DIN EN ISO 9001 certified production sites
- ◆ FSSC 22000/ISO 22000 certified
- Processes according to HACCP
- Compliance and commitment with the FSMA (food safety modernization act)
- Tailor-made and innovative solutions according to customer requirements
- Highly qualified experts in R&D lab and application technology with long-term experience and a wide variety of possibilities to develop new products and applications
- Joint product and application development together with our customers
- ◆ Our manufactured products are exclusively Made in Germany
- ◆ A wide range of more than 400 different Mineral Salts
- Products in compliance with the most relevant pharmacopoeias (Ph.Eur., USP, BP), food codices (FCC, E-numbers, etc.) and customer specific requirements
- ◆ Regulatory documentation (CEP, ASMF, etc.)
- ◆ REACH compliance on request
- Wide range of production equipment
- ◆ Social and environmental standards (DIN EN ISO 50001, EcoVadis, Sedex)
- High purities can be realized according to specific requirements
