molvik

laminated tubes

Molvik laminate tubes are functional, ecological and attractive packages, primarily used for packing toothpastes as well as other paste products in cosmetics, chemical, nutritional and other industries. This packaging protects in a perfect way the content from the outer influences, and due to its practical usage and the attractive look, have a great role in the presentation and sales of the customer's products.

Molvik offers high quality Al-laminate tubes (with Al barrier) or PB-laminate tubes (with EVOH barrier). The tubes are made of five-layer foil and can be white, silver, transparent, with or without print. High quality print enables customers to combine different printing techniques (flexo printing, gold stamping, serigraphy, foil stamping, etc.).

According to customers' demands, the production of all laminate tubes comprises a range of different diameters and lengths of tubes which can be combined with several variants of caps.

aluminium tubes

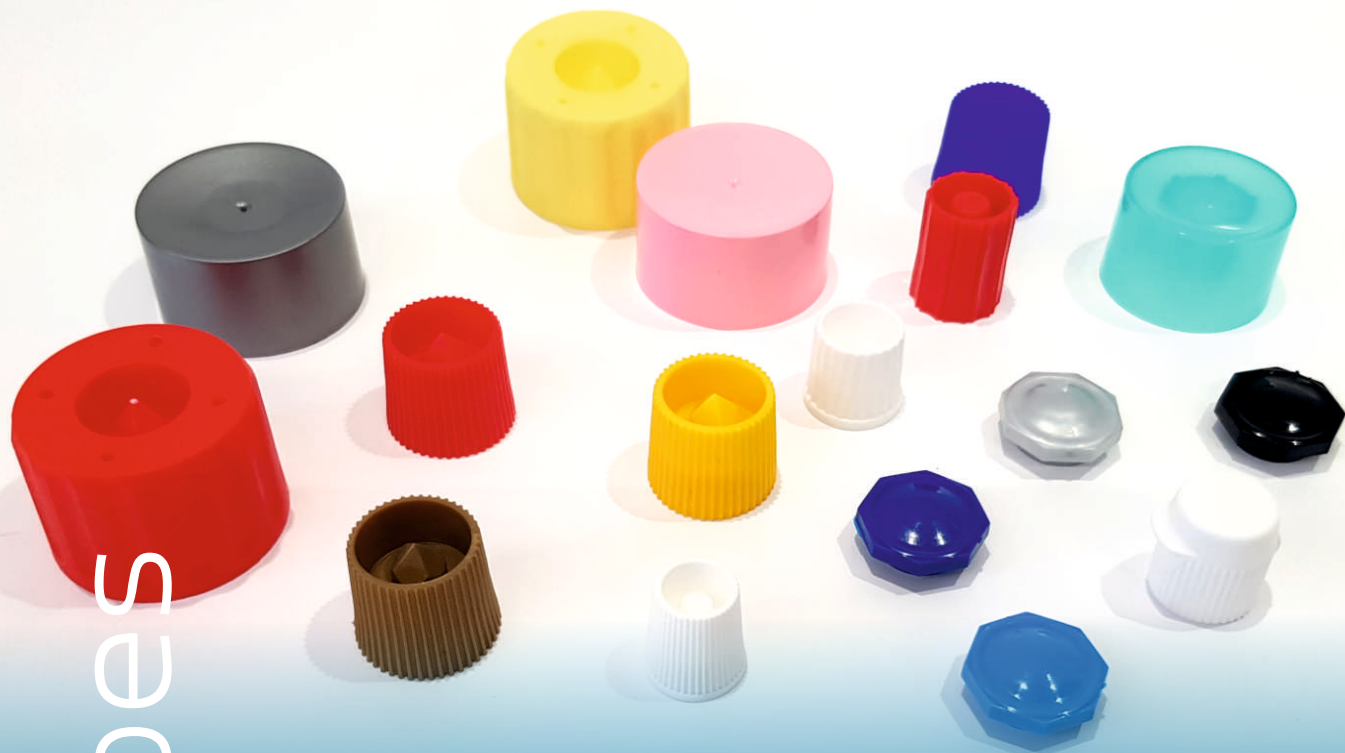

Molvik's standard program includes aluminium tubes of different technical characteristics, depending on buyers' requirements. A variety of diameters, lengths, tube necks and caps can be combined with tubes which are used as packaging for products of pharmaceutical, food, cosmetic and chemical industry.

Produced of 99% of pure aluminium in combination with other production materials from certified domestic and foreign suppliers, Molvik's aluminium tubes offer an excellent protection for every paste product. Molvik produces tubes of high technical quality with excellent visual appearance, where color, shape and function are in perfect harmony for advanced packaging properties.

- The biggest production of Molvik company is the one of tubes for pharmaceutical sector for packaging of ointments, creams, gels etc. Molvik guarantees the highest quality of tubes and packaging cleanliness level from beginning to the end, due to its defined procedures, clean room production environment, multi-level quality controls, comprehensive documentation and constant optimization of the production process.
- Aluminium tubes for food are also highly represented especially for packaging of tomato salsa, mustard, mayonnaise, ketchup, fish pastes, and similar creams and pastes.
- Molvik also produces aluminium tubes for cosmetics as packaging of hair colors, hand creams, face and body creams, shaving pastes etc.
- For household and technical industries, we have a variety of different tubes for paint colors, cleaning products, shoe polish, glues, cleaning pastes and similar uses.

caps for tubes

PLASTIC CAPS FOR ALUMINIUM TUBES

Molvik line of plastic caps for aluminium tubes consists of a wide product array of different shapes and dimensions. Cap moulds are manufactured mostly in our own tool rooms.

The tube caps differ according to shape, intended use and type.

Depending on the tube neck type, caps can be with or without pin, intended for extended-neck tubes, smooth or ribbed, white or colored.

They are available in any color required by the client.

PLASTIC CAPS FOR LAMINATE TUBES

Molvik has a broad range of various shapes and dimensions of caps for laminate tubes which are mostly produced for our own needs, while a part of them is launched onto the market.

The closures can be made white or in all possible colors and shapes, smooth or ribbed, depending on buyer requirements.

MOLVIK - THE COMPANY WITH A LONG TRADITION IN THE PACKAGING INDUSTRY

We manufacture various types of aluminium tubes, multi-layered laminate tubes and plastic caps. Our company is active in all industrial fields where tubes for packaging paste-type products are used, mostly in the pharmaceutical, food and cosmetics industry. Our clients are also our long-standing business partners from whom we learn with each new day, with whom we have developed and grown, respecting their wishes and needs. Our collaboration with our clients is based on open communication, flexibility and a fair business relationship.

Our quality and environmental protection policy is at the basis of our Integrated Quality and Environmental Protection System, serving as the foundation of Molvik's business activities and thereby guaranteeing security and high product quality.

As requested by our clients, our tubes are manufactured in class D cleanroom conditions, with the quality of tubes for pharmaceutical, food, cosmetic, veterinarian and chemical products being ensured through prescribed and documented manufacturing and quality control processes, as well as guaranteed by our quality and environmental protection certificates ISO 9001 and ISO 14001, statements of compliance with EU legislation, certificates of quality from approved suppliers and analytical reports.
