Logistics (Warehouse)

Logistics (Warehouse)

All material flow in the depot are managed by WM (Warehouse Management) system which is suitable to GMP and SAP integral.

In 3.500 m² closed space 3.700 copy of pallets storage capacity fast merchandise transfer can be done.

For Hormone materials there is a different storage separate from main building. Suitable to cold chain 2-8 °C storage space, is a different segment for storage.

For product which are sensitive to moisture, there special kind of storage spaces. And same thing goes for toxic, critic and sensitive materials as well.
