

Advancing APIs from discovery to manufacturing

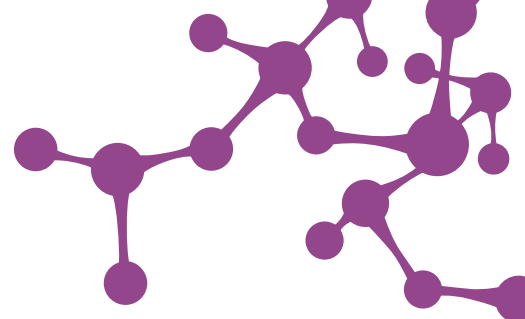

Curia is one of the largest independent developers and suppliers of APIs to the life sciences industry. Our complete suite of capabilities supports the chemical development and cGMP manufacture of complex APIs, including but not limited to potent and cytotoxic compounds and controlled substances. With world-class facilities in North America, Europe and Asia, we provide the scale and technology to serve your needs from development to manufacturing, for small to commercial-sized batches. Curia has a track record of quality and compliance with the FDA, AIFA, PMDA and other regulatory agencies and more than 550 API DMPs filed worldwide.

Delivering Complex Science and Expert Solutions

We have a robust portfolio of both market-leading APIs and generics, as well as world-class capabilities in niche and high-barrier-to-entry technologies.

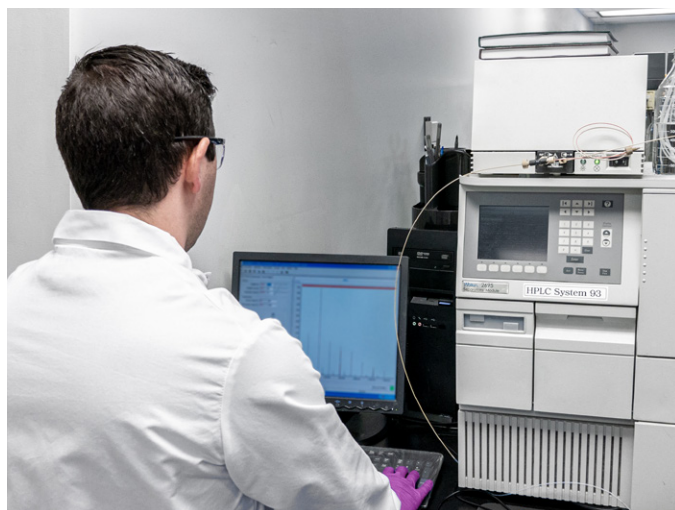

Our offerings include:

- + More than 240 commercial APIs
- + Sterile and high-potency APIs, steroids, hormones, monobactams, boronic acids and controlled substances
- + Expert custom synthesis and contract manufacturing via a global network of facilities
- + Analytical research and testing services, including solid-state chemistry and container closure integrity testing
- + Opportunities to vertically integrate your projects with our complete suite of discovery and drug product solutions

Specialized Technology Expertise

- + Hydrogenation
- + Fermentation
- + Biotransformation
- + Industrial chromatography
- + Flow chemistry
- + Spray drying

Controlled Substances

Curia is an industry leader in the development and manufacture of DEA-controlled substances and derivatives.

- + Expert manufacturing of Schedule I-V compounds
- + DEA licensed to import Schedule II narcotic raw material for the manufacture of opium-derived products
- + Product classes including phenidates and amphetamine derivatives and precursors
- + Dedicated aseptic fill-and-finish facility licensed to handle Schedule II, IIN, III, IIIN, IV and V controlled substances

High-Potency APIs (HPAPI)

We offer more than 30 years of expertise in the production, handling and containment of cytotoxic and other highly potent compounds.

- + State-of-the-art, SafeBridge-certified facility
- + Equipment including cGMP-compliant glove box isolators and reactors capable of handling materials with OELs under 1 ug/m³
- + Manufacturing capabilities up to 1200 L reaction scale with batch sizes of 50-100 kilograms
- + Large-scale cytotoxic capabilities

Curia, formerly AMRI, is a global contract research, development and manufacturing organization, offering products and services across the drug development spectrum to help our partners turn their ideas into real-world impact. We partner closely with pharmaceutical and biotechnology companies to boost business performance and improve patients' lives.
