

SASY™

The proprietary safety syringe that ensures safety and eliminates underdosing

SASY is part of DALI's patient-centric product portfolio for healthcare professionals and self-injection at home.

A customized version of SASY is expected to be launched H2 2023

SASY™

SASY is the newest addition to DALI's safety devices portfolio

1 SASY is extremely intuitive to use.

2 By utilizing its patented mechanism, the SASY minimizes the potential for user mistakes

- **Prevents underdose** delivering of full drug volume

- **Ensures safety** mechanism activation

3 SASY delivers confident feeling to the user and offers high level of ergonomics, thanks to its robust design and being firmly built

4 Offers simplified secondary packaging operations

5 Same user steps to existing safety syringes on market

6 Conforms to usual HCP injection practices

7 Fits conventional 1mL long glass prefilled syringes (can be customized for other sizes)

While testing common commercial safety syringes,

it was found that the amount of drug underdose resulting from a potentially user's usability error can reach up to 33%

and 13% of the tested nominal fill volume which was 0.4 mL and 1.0 mL respectively, with 95% confidence interval*

* Data on file at DALI.

Medical Devices

DALI Medical Devices has been developing drug delivery devices from concept to supply for pharmaceutical and medical device companies since 2003.

DALI's Product Families Include Solutions For:

- Self-injection and healthcare professionals
- Liquid and reconstitution formulations
- Low to high viscosities
- Niche and high-volume products
- Biologics, Biosimilars, and Generics

DALI supports pharma customers by supplying any information and data needed, such as Device Master File (MAF), etc. for any regulatory submission (e.g. FDA combination-products, 510(k), CE, etc.)

SAN®Light safety needle launched:

2021 EU 2022 U.S.
