

CONTINUOUS MANUFACTURING MODULAR API PLANT

CordenPharma commissioned a modular continuous manufacturing plant from Microinnova Engineering, facilitating improved production capacity.

The four thermostats enable the use of different temperature levels in different stages of the process. The modular design provides **smart process flexibility** enabled by a standardized and uniform exchange of functionalities for **multi-purpose processes and mobile installation** in a containerized environment. The modular plant system operates **automatically**. Achieving full customer satisfaction, Microinnova's engineers are delighted to have been able to once again provide more flexibility and increased capacity to a valued customer.

TECHNICAL DATA

Modules	Specifications
4 Dosing Lines	<ul style="list-style-type: none"> • 2: made of Hastelloy • 1: made of stainless steel • 1: metal-free • Designed for flow between 15 & 250 ml/min at 20 bar
Reaction & Quench	<ul style="list-style-type: none"> • Supply max. 500 ml/min at 20 bar

Our experts are looking forward to your inquiries about our plant systems!
