CELL FUNCTION SUPPORT

ROYAL JELLY

NAD

Q10

ZINC

Vitamins D3 and B1

ANTI-AGEING ON A CELLULAR LEVEL

food supplement in capsules

- Unique **ROYAL YOUTH™** formula, a standardised combination of royal jelly, nicotinamide adenine dinucleotide (NAD) and Q10 coenzyme with zinc and vitamins D3 and B1.
- An effective approach to ageing cells. By 2040, the population over 65 will increase by as much as 62.5%!

New generation of ANTI-AGEING food supplements

Who is BEELIXIR™ intended for?

- For all people over 30.
- For all those who want to extend a healthy lifespan as much as possible.
- For all those who want to slow down the biological ageing of cells and the entire organism.
- For all those who want to supplement a healthy lifestyle with ANTI-AGEING support on a cellular level.
- For all those who still have many plans in their life and would really want to "live" for the rest of their lives.

Why ANTI-AGEING support on a cellular level?

- Life expectancy is increasing, but not the period of a healthy life – due to ageing, the risk of developing chronic diseases increases drastically every decade.
- As we age, the amount of DNA errors increases. As a result cells begin to perform their tasks not as well as before and contribute to aging of the whole organism.
- We cannot influence chronological age. However, we can slow down biological ageing and extend the period of health – with correct lifestyle choices and also with effective ANTI-AGEING support for processes on a cellular level.

NET QUANTITY • 13.2 g
(40 capsules 330 mg each);
for 20 days of regular use

beelixir™

CELL FUNCTION SUPPORT

How does BEELIXIR™ work?

It contributes to normal cell division, normal DNA synthesis, release of energy in the cell and protection of cells from oxidative stress:

-  **Royal jelly** extends lifespan not only of bees but also of some other animal species. It activates mechanisms of longevity (activation of sirtuins), increases the body's resistance to oxidative stress and thus protects cells from damage that causes their aging.
-  **NAD** (nicotinamide adenine dinucleotide) is the main cofactor in energy production, which maintains the normal functioning of cells and the body. It is also indispensable for the functioning of the system that repairs DNA damage in our cells. NAD in our body decreases with ageing. By the age of 50, the average person has only half the NAD of their youth. By the age of 80, NAD is reduced to only a 1–10% level. NAD in the body is also reduced by lifestyle, such as unhealthy eating and lack of exercise.
-  **Coenzyme Q10** is involved in the production of cellular energy, acts as an antioxidant, and is also important in duplicating and repairing DNA. With age, the level of Q10 in the body decreases.
-  **Zinc and vitamin D** have a role in the process of cell division. **Zinc** contributes to normal DNA and protein synthesis and to the protection of cells from oxidative stress.
-  **Thiamine** contributes to normal energy-yielding metabolism, to the normal function of the nervous system and to the normal function of the heart.

Content

Content	2 capsules*	NRV**
Zinc	1.5 mg	15 %
Vitamin D3	25 µg	500 %
Vitamin B1	0.55 mg	50 %
Royal Youth™	484 mg	
of which		
10-HDA	14 mg	
NADH	10 mg	
Q10 coenzyme	50 mg	

*Recommended daily dose **NRV = nutrient reference value (adults)

Why is BEELIXIR™ so effective?

-  Carefully selected ingredients work in synergy for maximum effect on a cellular level. It contains a unique **ROYAL YOUTH™** formula – a standardised combination of royal jelly, nicotinamide adenine dinucleotide (NAD) and Q10 coenzyme with zinc and vitamins D3 and B1.
-  The content of the key component **royal jelly, 10-HDA** (10-hydroxy decenoic acid) unsaturated fatty acid is standardised. Royal jelly also contains spermidine, which contributes to self-cleansing and maintaining cell vitality.
-  It contains **PANMOL® NADHmicro** – a protected form of reduced NAD. It is encapsulated in beeswax and palm fat for protection against decomposition in the stomach and protected against oxidation with a stabilized form of chlorophyll. In this way, it is well absorbed and directly available to cellular processes.
-  It contains **zinc**, a very important element for the normal function of human proteins and enzymes. A large part of these proteins contribute to the expression of genes, the maintenance of cell identity and the response of cells to changes in the environment.
-  **Vitamin D3** is involved in many physiological processes (health of bones, teeth, muscles, immune response, cardiovascular disease, etc.), and the lack of this vitamin also affects the altered expression of genes.

Ingredients

Royal Youth™ (lyophilised royal jelly, stabilised reduced nicotinamide adenine dinucleotide (palm fat, beeswax, chlorophyllin, NADH), Q10 coenzyme), vegetable capsule (hydroxypropylmethyl cellulose), rice starch, zinc gluconate, vitamin D (cholecalciferol), vitamin B1 (thiamine hydrochloride), anti-caking agent: silicon dioxide.

Instructions for use

The recommended daily dose are 2 capsules in the morning, 30 minutes before a meal. Recommended use: at least 3 months.

Warning

The product is not suitable for individuals with an allergy to bee products. Do not exceed the recommended daily dose. Food supplements are not a substitute for a well-balanced and diverse diet, and for a healthy lifestyle. Keep out of reach of children! Store in a dark, dry place with temperature below 25°C.
