## Cream for hand-foot syndrome therapy

The therapeutic cream for hand-foot syndrome is a **medical device** in the form of a cream, rich in ingredients that form a moisturising-lubricating and protective-regenerative barrier on the skin.

### Actions

#### Hand-foot skin reaction (HFSR)

Associated with multikinase inhibitors (Sunitinib, Axitinib...)

#### Hand-foot syndrome (HFS)

Associated with agents such as 5-fluorouracil, doxorubicin and capecitabine.

#### Prevalence

60-80% of patients.

#### Symptoms

Redness and tenderness.

Peeling of the palms of the hands and soles of the feet.

Dry, numb or tingling skin.

### Success Story

- Nairobi Hospital
- Female patient, 45 years old
- Triple negative breast cancer
- Treatment : Docetaxel + Capecitabine (Xeloda)

Start treatment

After 2 tubes

### Ingredient

#### Syricalm®

Antipruritic, soothing and restores the skin's protective function.

#### Soybean Oil

Increases skin's barrier function

#### Omega Plus

Promotes regeneration and increases the barrier of the epidermis, improves skin elasticity.

#### Urea

Attracts and retains water. Exfoliating effect.

#### Shea Butter

Moisturises and lubricates the skin.

#### Silk Proteins

Prevents skin dryness, improves the epidermal barrier, reduces water loss from the skin.
