CHILD RESISTANT RESISTANT TO CHILDREN, GREEN AND LEAN

Preventing accidental children poisoning

Young children are curious by nature and always up to discovering new things. Children often get poisoned because they find dangerous products at their reach and they simply do not know they are harmful. Child resistant packaging is a key prevention device.

Resistant to children, easy to elders

The IGB CR cartons are made of a tear-resistant, 100% plastic-free cardboard that children cannot rip open. The cartons relock automatically when closed and can easily be opened by adults and elders. The IGB CR Folding Box is suitable for both hand packaging and automated packaging lines.

The range of IGB CR packaging

- The IGB child resistant carton looks like a regular box and has an automatic locking system that small kids are not able to operate.
- The range features two product lines: single use and multiple use cartons.
- The box comes with a key and can be easily opened by adults with its key or with everyday objects like, for instance, a regular key or a pen cap.
- The multiple use cartons, after the first opening, can be opened even without any key while remaining Child Resistant.
- The multiple use cartons also have tamper evident features.
- Both product lines can come with a blister pack locking feature which turns box and blister, as a whole, into primary packaging.
