Freeze Thaw Chambers

Storage conditions must be distributed in a manner that ensures that the product quality will not be adversely affected. With the exception of short transit times within the same climatic zone, it is virtually impossible to validate a shipping method against all environmental conditions.

Therefore, distribution stability studies are designed to generate additional data and to complement preformulation development and routine (ICH Q1A(R2)) studies

Mode of Operation

User can program a specific profile needed for their application to enable rapid simulation conditions & the need to replicate freezing & thawing during product testing. Upto 4 temperatures set point can be set in cyclic mode. eg. -20°C set for 48 hrs, 5°C for 24 hrs, 25°C for 72 hrs and 40°C for 120 hrs. No of such temperature cycles can be repeated
