

AMA Medical Manufacturing & BPI Joint Venture

The AMA–BPI Joint Venture is Barbados' first commercial proof point for building a domestic pharmaceutical manufacturing industry, combining BPI's national mandate and market access with AMA Medical Manufacturing's technical and industrial expertise. Its first investment is a US\$32 million state-of-the-art IV fluids facility, designed to produce up to 12 million IV bags annually for Barbados, CARICOM and export markets—directly reducing the Caribbean's current dependence on imported IV fluids.

Beyond IV fluids, the partnership is intended as a scalable manufacturing platform for additional pharmaceutical products, while pioneering a new Africa–Caribbean pharmaceutical trade and investment corridor. **Connecting Africa and the Caribbean to manufacture medicines for our own health security.**
