Asonor®

Snoring Treatment

Asonor® is a clinically proven Class IIa medical device designed to relieve snoring by maintaining throat hydration during sleep. Asonor® is a medical device – a nasal spray targeting the main cause of snoring – dehydration of the soft tissue at the back of the throat.

Asonor® can help you to enjoy quieter nights and feel refreshed in the morning.

Asonor® anti-snoring spray eliminates the vibrations that cause snoring. The jet stream allows the solution to reach the throat to lubricate the mucous membrane and the soft palate. The active ingredients in Asonor® will keep your throat hydrated and decongested throughout the night.

Simple treatment with Asonor®

Snoring can disturb you and/or your partner's night rest. Asonor® nasal spray has a patented jet stream formula, that helps to reduce snoring to a minimum through the night by acting on the main cause of it – the throat tissues.

Snorers have lower quality of life

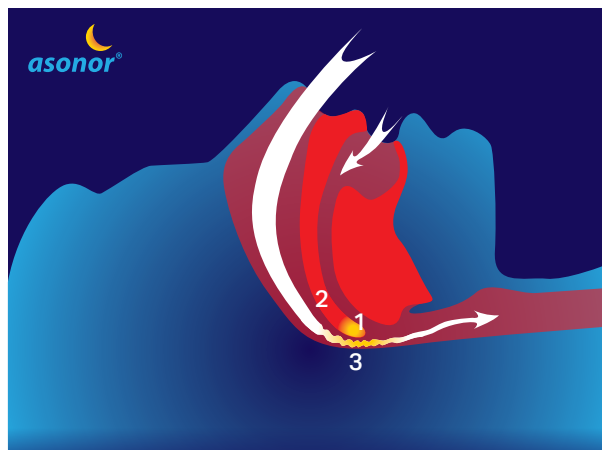

International research shows that snorers have decrease in quality of life in the form of sleep apnea (OSA), cardio-vascular diseases, high blood pressure, stress, migraine, decreased sexual function, diabetes, headaches and premature death.

Why do we snore

When we sleep, the muscles at the back of our throat⁽¹⁾

relax and partially block the passage of air. Sometimes these muscles⁽²⁾ vibrate as the air passes, producing the sound that is known as snoring⁽³⁾.

When you snore, your breathing becomes irregular. During the night this causes a pause in breathing that can last up to 10 seconds, and can be repeated many times during the night. You may not yourself notice these pauses – but your sleep has been disturbed. This means your body does not get the optimal rest and may result in tiredness the next day, which is not beneficial for your health.

Asonor® treatment is documented

Clinically proven by studies in university hospital in Copenhagen and in London hospital.

In independent user test of 7 different anti-snoring products on men between the age of 35-50 and their partners, Asonor® performed as the #1 product overall.

Asonor® ranks as one of the world's best anti-snoring treatments.

Product information:

Asonor® contains: Sodium Chloride, Glycerol, Polysorbate, Edetate sodium and purified water.

Preservation: Potassium sorbate 0.15%
