Pharma Business Developer? Don't look any further.

We earn the trust of our clients by deeply understanding **their unique challenges** and deploying our innovative, in-house portfolio **to create successful partnerships.**

START

How we work

1. BEFORE PARTNERING WITH YOU

Identification of medical and market needs.

Healthcare OTC products **research and development.**

Registration for immediate commercialization in Europe.

2. AFTER WE MEET YOU UNTIL PRODUCT LAUNCH

We want **distributors like you.**

We reach **the best agreement** with you.

We collaborate closely with your **Quality and Regulatory Affairs team** prior to launch, ensuring compliance for local market entry worldwide.

3. AFTER PRODUCT LAUNCH

We provide clinical insight acting as a back office for you.

We help with marketing ideas to enhance market presence and sales.

We always look for long-term partnerships, achieving goals in the healthcare markets.

Earwax removal: not just about cleaning your ears

OTIBLOCK® is a Medical Device scientifically formulated to remove earwax from the external ear canal. The product has two main advantages over the existing options in the market:

- **OTIBLOCK®** works as a true cerumenolytic, breaking earwax down, this property makes **OTIBLOCK®** particularly appropriate as a preventive treatment for people prone to the formation of earwax plugs.
- Maintains the **physiological pH** of the external ear canal.

More information: www.otiblock.com

Because a dry ear is a healthy ear

OTIDRY-MD[®] is an otic solution that dries the outer ear canal, slightly acidifies the otic environment, without overdrying the outer ear skin, all of this aimed at preventing otitis externa.

-  The formulation is based on a well-known and validated compounding formulation widely used by swimmers and other water-sports lovers.

Itch free ears. Naturally

OTIKEEN® is a corticosteroid-free formulation clinically and dermatologically proven to reduce itching, discomfort, and erythema (redness).

🔗 **OTIKEEN®** effectively hydrates the ear canal skin, revitalizing it with vegetable oils and moisturizing components to restore the skin barrier and alleviates itching.

🔗 Additionally, **OTIKEEN®** incorporates antioxidants to shield the external ear canal skin from oxidative stress, preventing itching and minor flaking induced by external factors.

RHINATUR[®] Nasal spray

RHINATUR[®] Nasal spray is a medical device, MDR certified, with a formulation backed by extensive publications that supports its efficacy in respiratory infections and allergic rhinitis.

Featuring a patented complex of Resveratrol from *Polygonum cuspidatum* and Carboxymethyl betaglucan in a saline solution, **RHINATUR[®] Nasal spray** is clinically proven to:

- Fluidize nasal secretions: Helps to thin and clear mucus, providing quick relief from stuffiness.
- Alleviate rhinitis symptoms: Effectively tackles a runny nose and congestion, restoring comfortable breathing.
- Reduce nasal symptoms in recurrent respiratory infections.

PLIADERM[®] perianal skin gel

This herbal medicine product harnesses the natural power of oak bark, known for its powerful astringent properties. This unique formula uses a standardized oak bark extract, carefully processed to ensure a high concentration of active substances.

-  This guarantees a broad and effective range of benefits to address perianal skin itching and irritation.
-  Infused with allantoin and panthenol to soothe and moisturize, and a touch of clove flower oil for its natural properties, this gel is designed to provide comprehensive and intensive care.

PLIADERM[®] perianal cleansing foam

This gentle, soap-free cleansing foam is specifically formulated for the delicate perianal skin, and it is an excellent coadjuvant to PLIADERM Perianal gel. Unlike traditional cleansers, our syndet foam uses a mild surfactant to effectively clean without stripping the skin's natural moisture.

Enriched with a powerful blend of soothing and hydrating ingredients including, among others: Pentavitin (a carbohydrate complex derived from plant sugars; its molecular structure is very similar to the natural carbohydrate fraction found in the stratum corneum, the outermost layer of the skin); betaine and glycerin work to keep the skin soft and supple, while natural extracts of Chamomile, Centella Asiatica, and Aloe help to calm and restore the skin's balance.

The convenient foamer dispenser creates a light, airy foam for a gentle and refreshing cleansing experience.

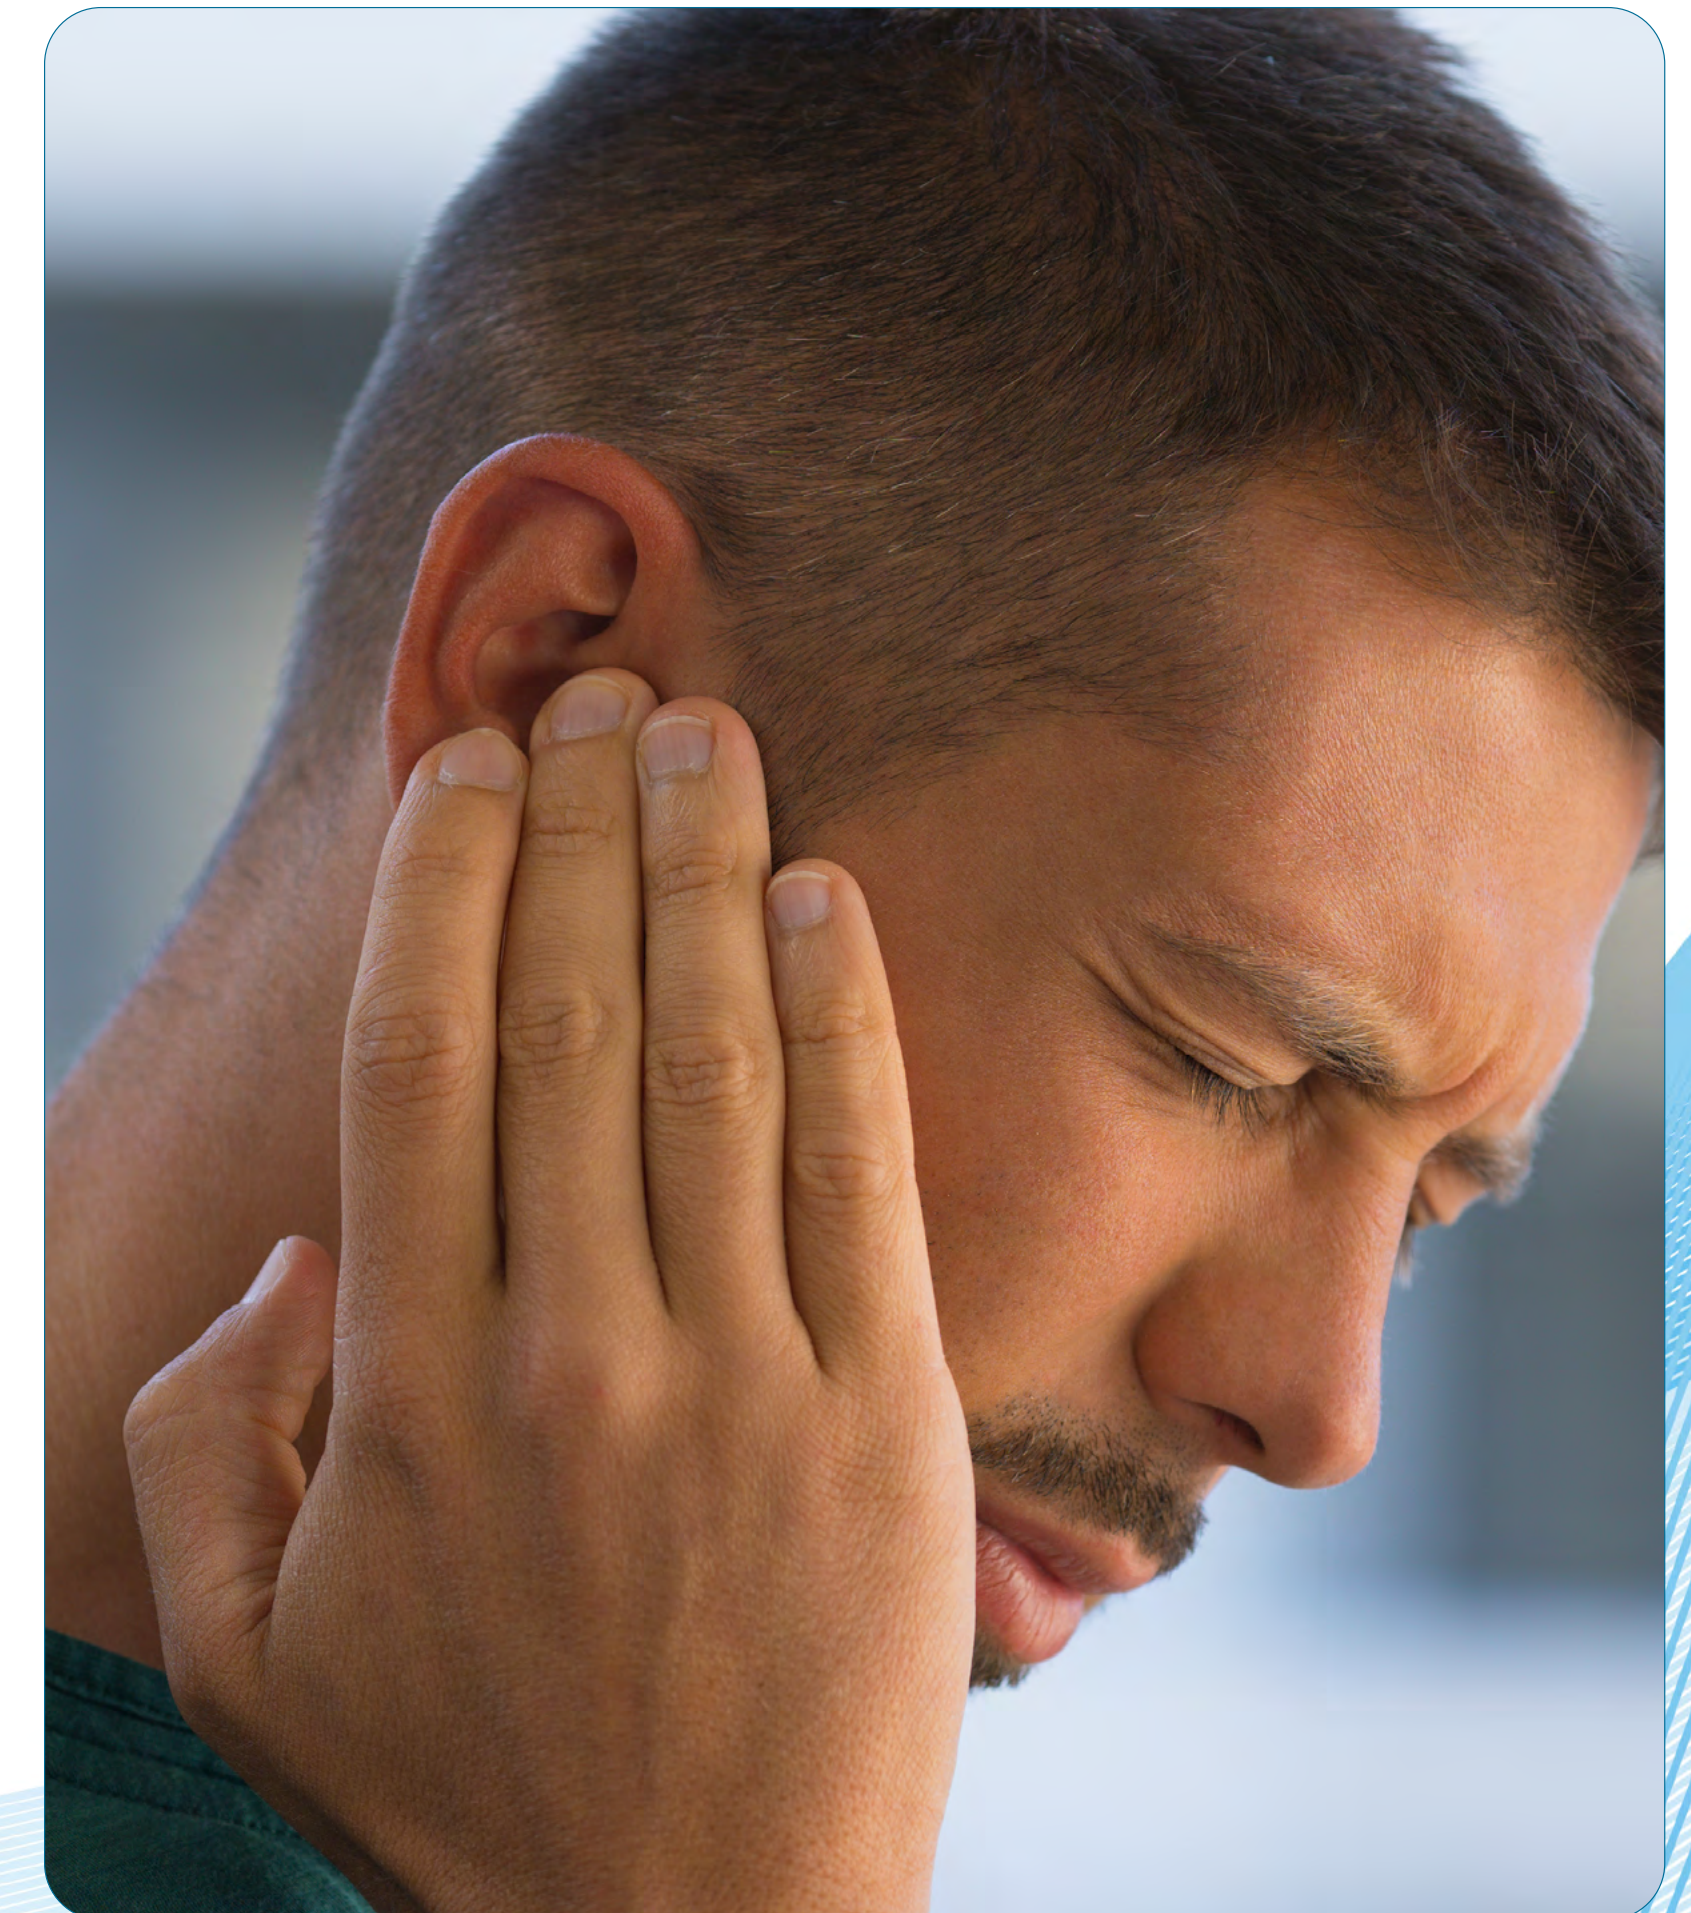

MIT-114

MIT-114 is an oral-route herbal medication that offers a promising therapeutic pathway for tinnitus. By targeting the underlying neuroplastic mechanisms, MIT-114's unique neuroprotective properties are designed to restore auditory function. The clinical data suggest that MIT-114 can:

- Improve Cochlear Nerve function:** By protecting and potentially repairing the delicate nerve fibres within the cochlea, MIT-114 aims to re-establish the integrity of the auditory signal at its source.
- Enhance neural conduction:** The composition is designed to optimize the transmission of these signals along the auditory pathway to the brain.

By strengthening the connection between the ear and the brain, MIT-114 may enable the central auditory system to process environmental sound more effectively. This could, in turn, reduce the brain's maladaptive hyperactivity, leading to a significant decrease in the perception of tinnitus.

MIT-114

MIT-802

MIT-218

MIT-802

Itching is the main symptom in many dermatological diseases. It can also be caused by insect bites, contact with stinging plants, etc.

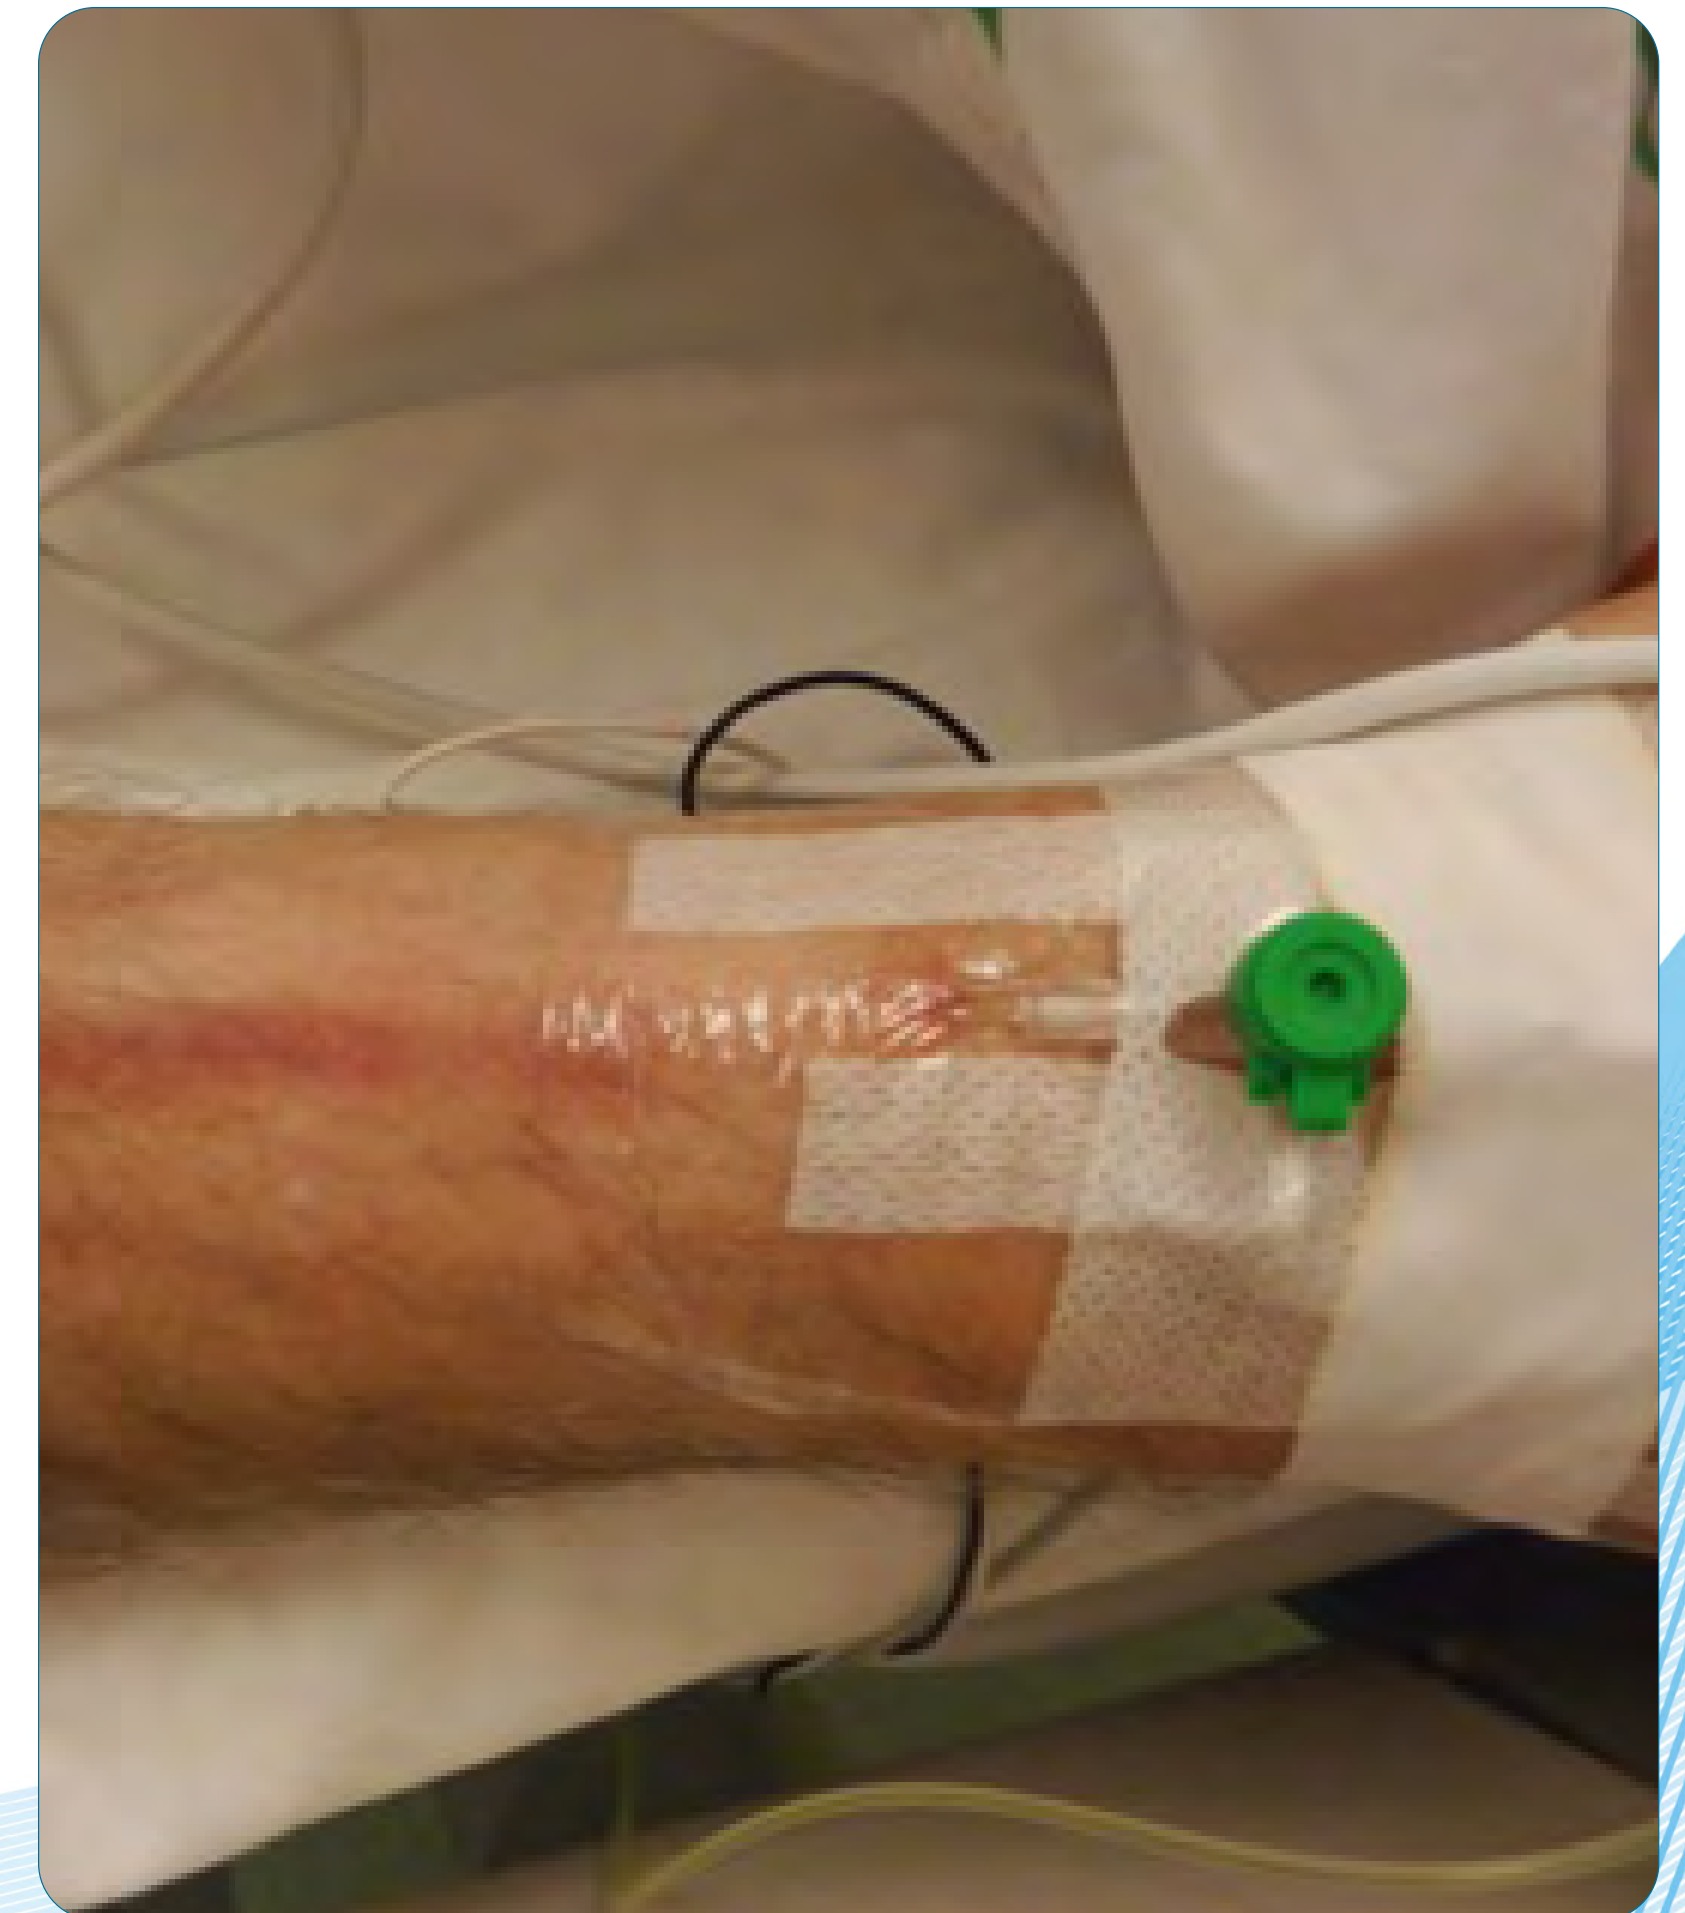

Mitelos is working on an innovative, highly tolerable formula that will offer a different approach to current treatments, with immediate soothing action and restoration of skin balance for long-lasting comfort.

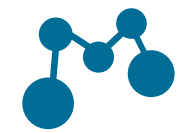

MIT-218

The insertion of a peripheral intravenous cannula (PIVC) for intravenous fluids and medications is the most common procedure in hospitalized patients worldwide. A frequent PIVC complication is phlebitis, that is, inflammation of the vein, which may be mechanical, chemical or bacterial in origin. Its treatment is a global unmet medical need.

Mitelos is committed to meeting this need and is already developing a specific product that it aims to bring to market in the coming years.
