ABOUT US

Formularium Srl is an innovative start-up founded on the experience of its founders, operating in the field of formulation and production of dermocosmetics, medical devices and nutraceuticals.

Our main focus is the research and production of bio-ingredients for cosmetic and medical use, derived from organic materials.

THERE, WHERE IT ALL BEGAN.

Founder of the group has been Dr. Gaetano Galeppi Sr., who established his pharmacy in 1939, marking the beginning of a longstanding tradition of excellence in the field of health and personal care. Since then, his heirs have remained true to his legacy, maintaining a commitment to crafting unique, high-quality products. Their passion and dedication are evident in every aspect of the business, as they continue to create exceptional skin-care and personal-care items. These products are carefully formulated with the finest, most selective ingredients, ensuring that every item upholds the high standards set by the founder and his vision.

MOVING A STEP FORWARD

Formularium Srl is a spin-off of *Dr. Lauranne Srl*, the cosmetic branch founded in 1971. This company carries forward a rich tradition that dates back to the previous century, reflecting a long history of expertise and commitment to quality. *Dr. Lauranne Srl* has been a key player in the industry for decades, and **Formularium Srl** continues this legacy by focusing on innovative solutions and high-quality products, staying true to the values and experience that have defined the company for over half a century.

THE PRESENT

We operate across two strategic locations, one in Milan and the other in Rome, both situated in regions renowned for their rich agricultural and food production.

These prime territories offer a wealth of opportunities to source and transform processing by-products, enabling us to extract powerful bio-actives for the creation of advanced cosmetic and nutraceutical products.

Our goal is not only to create effective and innovative products, but also to work in a sustainable way, reducing environmental impact and promoting responsible manufacturing practices. We are committed to contributing to the well-being of people and the environment through our business, always maintaining high standards of quality and safety.

Formularium works exclusively with ultrasonic or sonication extraction method (UAE **Ultrasound Assisted Extraction)**

UAE currently represents one of the most environmentally friendly and efficient methods for the extraction of natural compounds, making the resulting extracts particularly suitable for a wide range of applications, both topical and systemic

Ecological method with lower economic impact: Using natural solvents such as water or glycerin, UAE fits perfectly into the principles of the circular economy and industrial ecology, reducing the environmental impact and associated costs

Higher yields and reproducibility: UAE offers greater uniformity in extraction results, ensuring higher yields and better reproducibility of the final product
