

New application of novel sodium hyaluronate

# Hyatru<sup>®</sup> Sodium Hyaluronate (Sterile)

The preferred choice for injectable preparations using non-terminal sterilization process

As a pharmaceutical-grade raw material meeting the highest industry standards, our sterile sodium hyaluronate is manufactured through a professionally designed aseptic process. The closed-system manufacturing workflow with stringent sterility controls ensures compliance with sterile quality requirements across all production batches. It is specifically designed for developing innovative formulations requiring ultra-high viscosity characteristics or thermolabile stability.

## Application
