

IMUNOLAK

STRENGTHEN YOUR BALANCE

3 BASIC PRINCIPLES OF A HEALTHY MICROBIOTA

01

Diversity

The greater the variety of strains the better

02

Abundance

The higher the number of each strain, the better

03

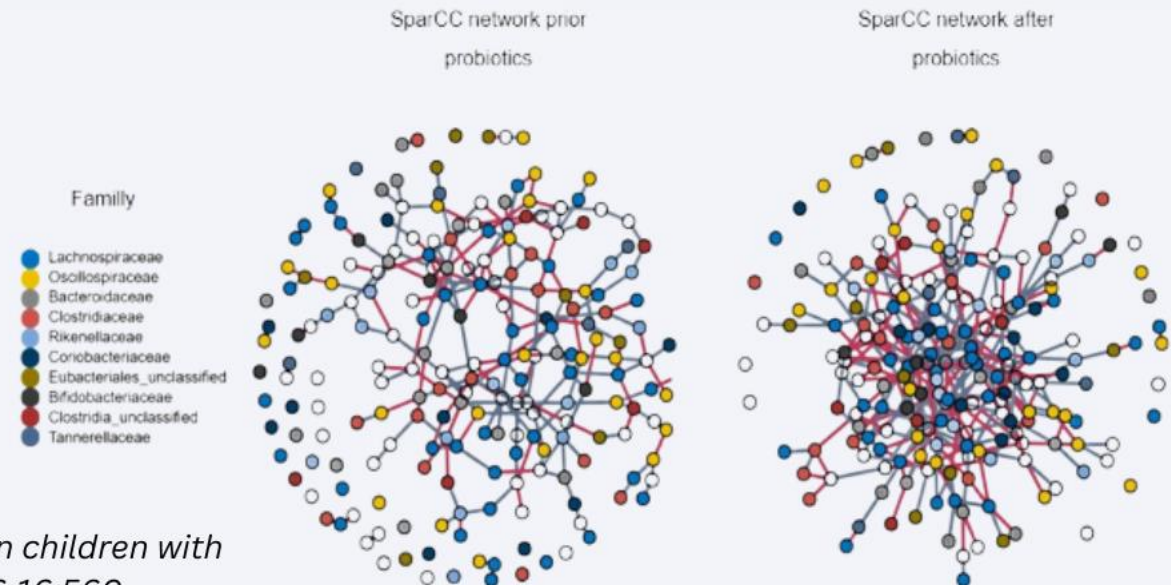

Communication

Interconnection and signaling between strains

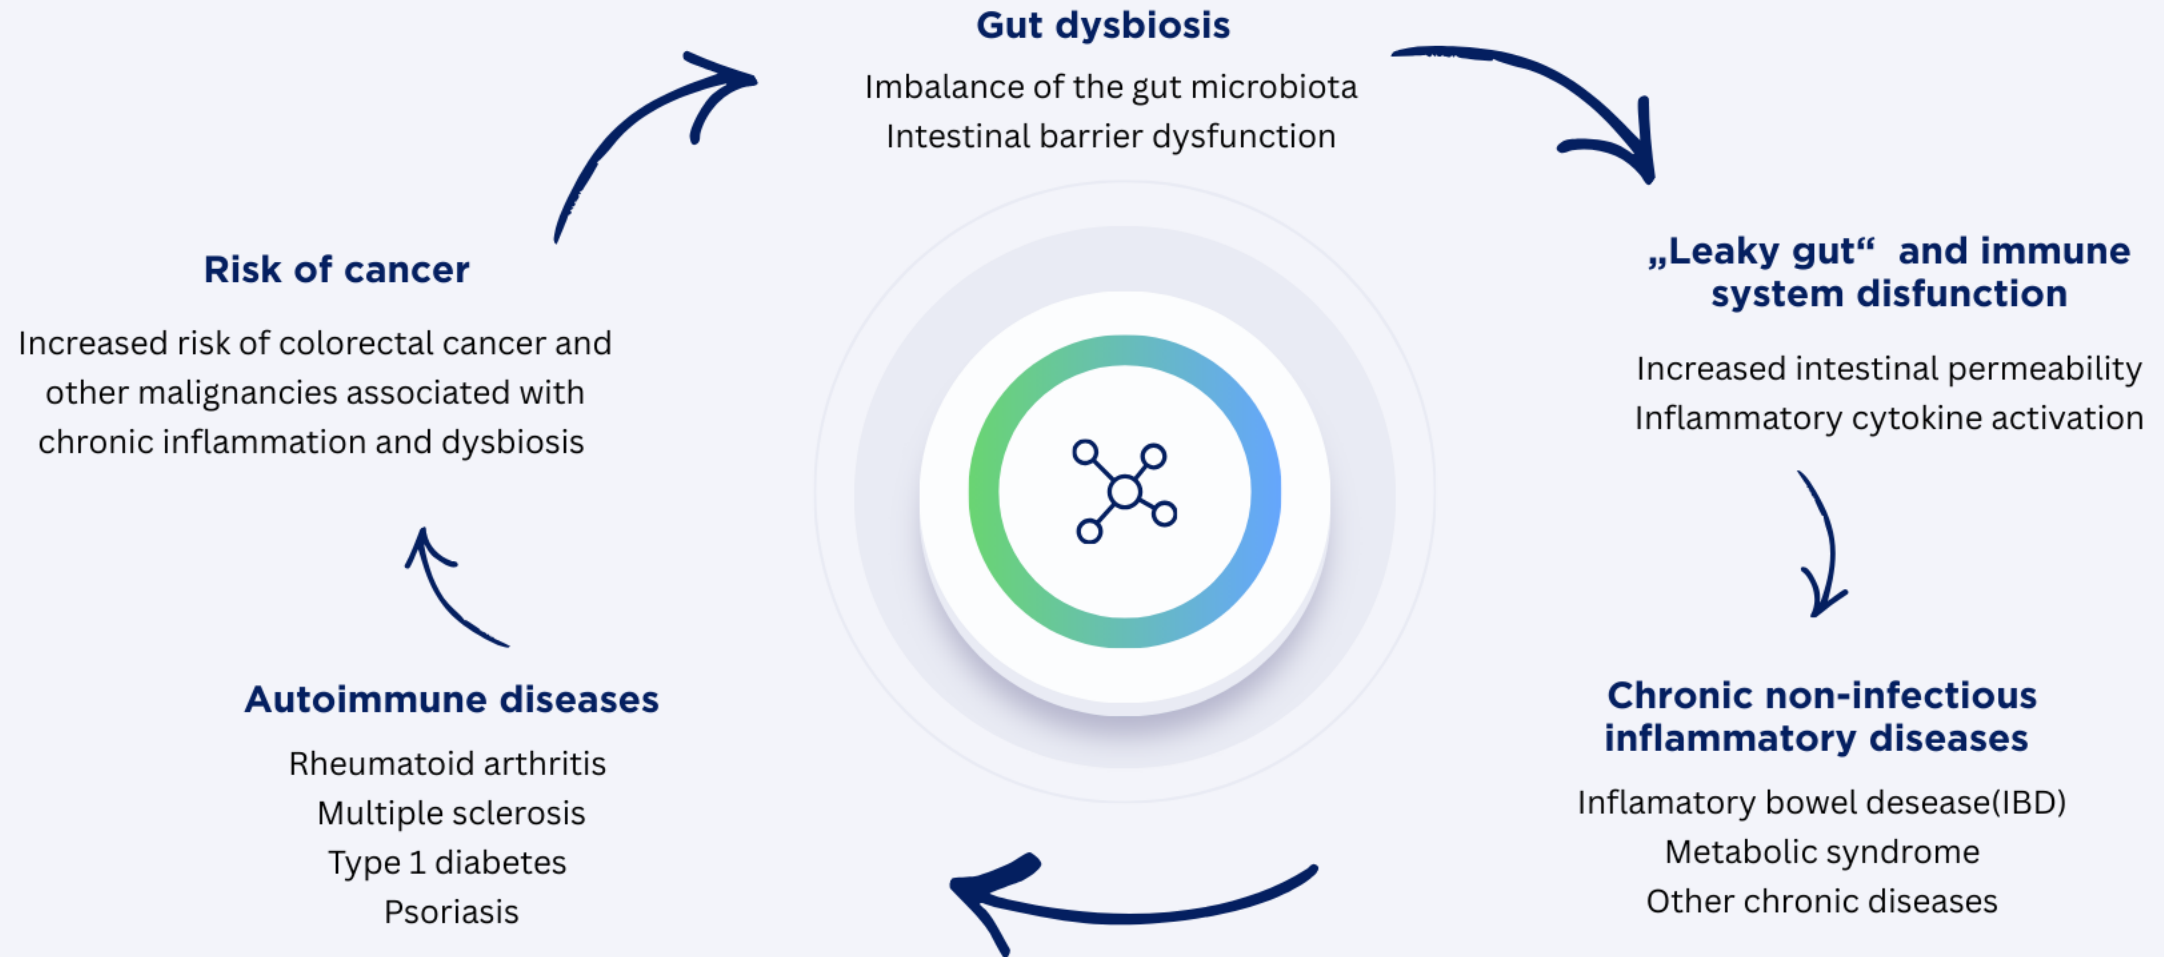

**IMUNOLAK
SUPPORTS ALL
THREE PRINCIPLES**

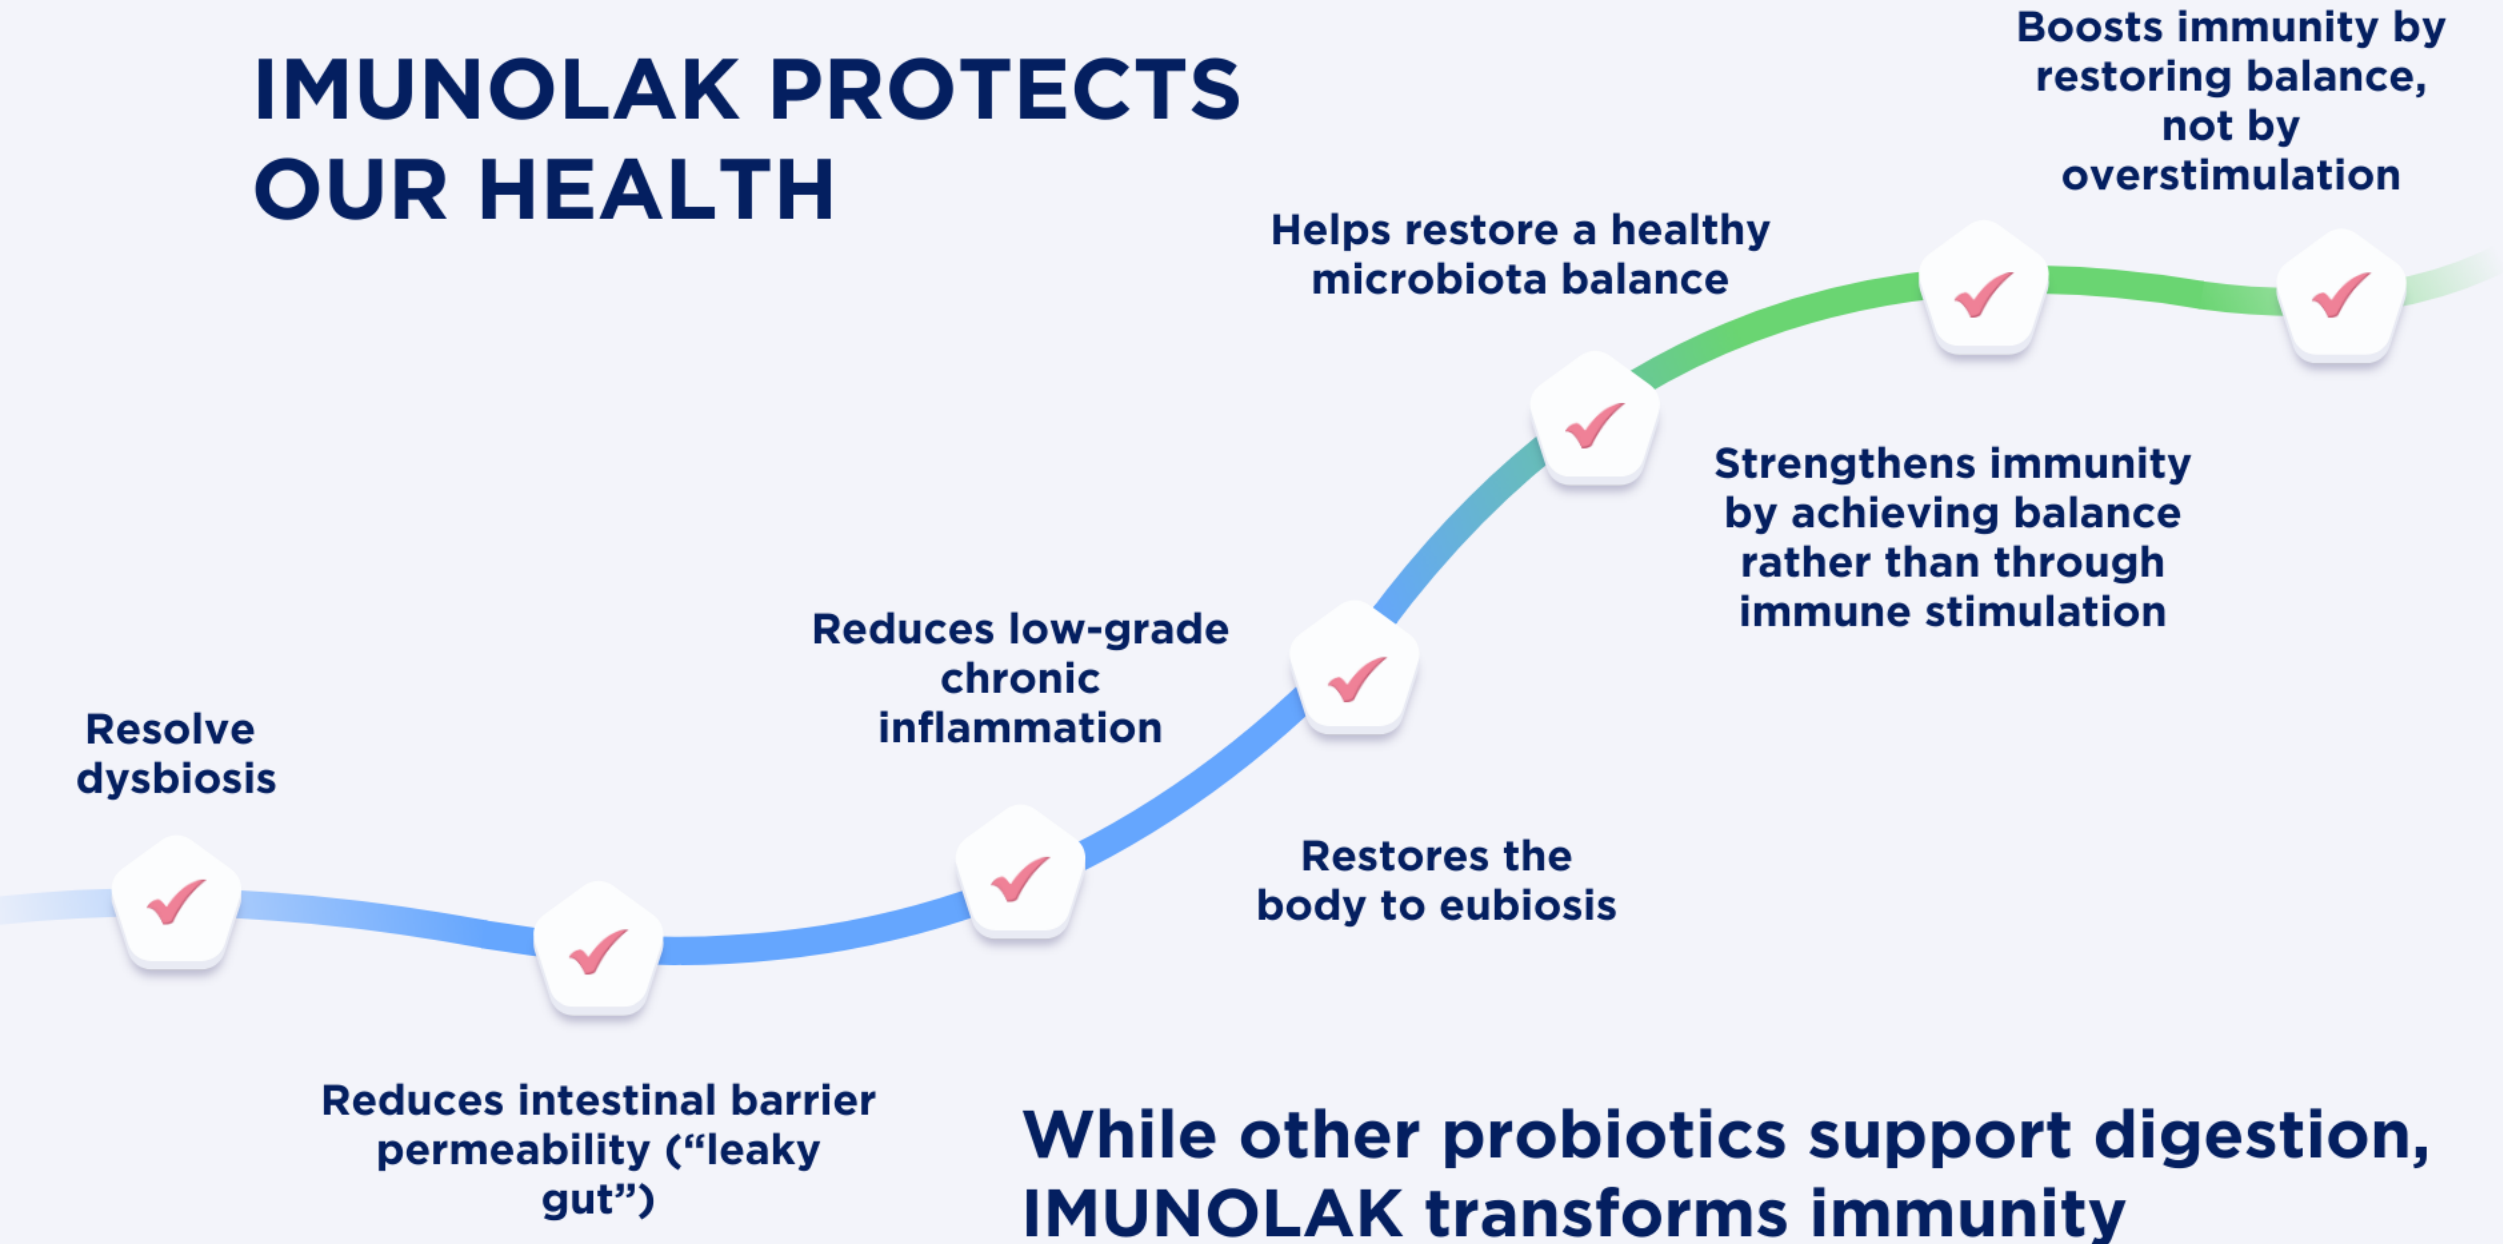

Protić D, et al. Microbiome modulation and behavioural improvements in children with fragile X syndrome following probiotic intake: a pilot study. *Sci Rep.* 2026;16:560.

CIRCULAR DYSBIOSIS

IMUNOLAK PROTECTS OUR HEALTH

IMUNOLAK

5 billion immune-supporting strains per capsule, guaranteed until the end of shelf life

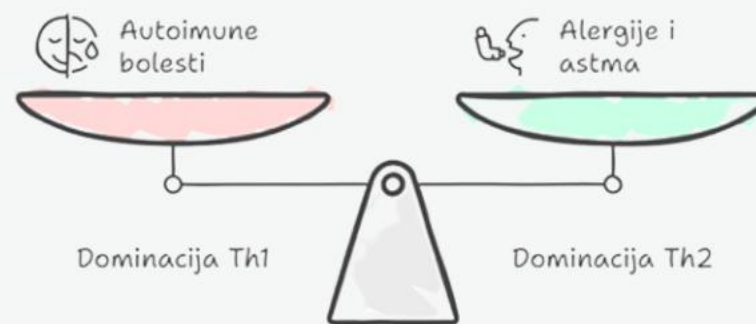

Lactobacillus salivarius BL 201

Lactobacillus casei BL 2201

Bifidobacterium breve BL 3406

Strain synergy:

- ✓ Reduces pro-inflammatory cytokine production
- ✓ Supports Th1/Th2 immune balance

An immunobiotic that brings the immune system into balance

IMUNOLAK STOPS THE ALLERGIC MARCH (PROGRESSION)

The root cause of allergic diseases lies in the gut.

Manifestations include:

- Food allergy – digestive system
- Eczema – skin
- Allergic rhinitis – upper respiratory tract
- Asthma – lower respiratory tract

By correcting dysbiosis and restoring the microbiota to eubiosis, the underlying cause is addressed and the problem is resolved.

Imunolak Kids study in children with atopic dermatitis:

Filipovic I, et al. Efficacy of a specially formulated combination of three probiotic strains with vitamin D3 and Zn in children with atopic dermatitis. Am J Pediatr. 2023;9(4):186–192.

IMUNOLAK STRENGTHENS RESISTANCE TO VIRUSES

By achieving Th1/Th2 balance:

- Susceptibility to infections is reduced
- The cellular immune response is favored
- Excessive immune reactions to viruses are minimized
- The body is efficiently protected against viral infections

Imunolak Adults recommendations:

- For adults with chronic diseases and weakened immunity
- Increased tendency to develop allergies, inflammatory diseases, and food intolerances
- Healthy individuals with higher needs for vitamin D and zinc

IMUNOLAK MODIFIES THE COURSE OF AUTOIMMUNE DISEASES

Contribution of IMUNOLAK to standard therapy:

- Stronger clinical response with Imunolak vs. without Imunolak
- Reduced inflammation and less pain
- Decreased need for corticosteroids
- Better therapy tolerability
- Faster and more frequent remissions
- Higher quality of life

IMUNOLAK DELAYS THE NEED FOR BIOLOGICAL THERAPY

Barac B, et al. Therapeutic efficacy of immunobiotics in patients with newly diagnosed rheumatoid arthritis. EULAR Congress, POS0483.

What makes IMUNOLAK unique

- ✓ **Proven efficacy in clinical studies**
- ✓ **Carefully selected, specific probiotic strains**
- ✓ **Clinically relevant bacterial count**
- ✓ **Immunomodulatory, not immunostimulatory action** – supports immunity without risk of excessive activation
- ✓ **Highest production standards** – manufactured under controlled conditions with strict quality and strain stability control
- ✓ **Consistent quality from first to last dose**
- ✓ **Developed with long-term dedication to patient health** – Imunolak is not a trend, but the result of years of expertise and experience
