

APPROVED AND COMPLIANT

Child Resistant Jars for Medicinal Cannabis

Welcome to Origin

Leaders in Medicinal Cannabis Packaging

Origin was established over 55 years ago based out of our dedicated Pharmaceutical Packaging, Logistics, Filling and Innovation Centre.

Origin offers customers a remarkable range of versatile medicinal packaging solutions that respond to the unique needs of the global medicinal cannabis marketplace. We facilitate our customer's vision to succeed by providing a wide scope; from concept design through to market solutions, supported by extensive global resources.

Our centre of excellence offers both strategic production and supply chain performance. Origin was established in 1963 and now operates globally from our dedicated Pharmaceutical Packaging, Logistics & Innovation Centre. We engage in the design, manufacture, and consolidated supply of pharmaceutical packaging, partnering with licence holders and CMOs.

The critical outcomes of a compliant and effective packaging continually remind us of the importance of a consistent and integrated approach to our work. As a sponsor of the pharmaceutical supply chain, complementing the colossal impact of life science companies worldwide, our close relationship with drug manufacturers, healthcare institutions, and consumers alike gives perpetual clarity to our key deliverables.

Dedicated Cleanroom Manufacturing For Medicinal Cannabis

Packaging for Medicinal Cannabis

Origin Pharma Packaging specialises in medicinal cannabis packaging, ranging from a large amount of stock products which are ready for call-off, to custom packaging, designed and created by our in-house packaging experts. Our team have the knowledge to advise on the best choice of materials for your packaging materials to achieve the best results for your target customers.

Our cleanroom manufacturing facilities (GMP accredited) enable us to create industry-leading packaging, compliant with strict pharmaceutical standards. Origin's market-leading production environment has a range of production techniques, making it one of the most flexible cleanroom packaging manufacturing facilities in the UK.

Facilities

- State-of-the-art cleanroom production facility that strictly adheres to ISO 7 class 10,000 and ISO 8 class 100,000, which each ensure the reliable prevention and control of airborne particles. Achieving these standards is no mean feat, as the cleanroom environment must comply with the following specifications at all times with no exceptions:
- The air is changed 10-25 times an hour
- Compliant to ISO14644, ISO9001 and ISO 15378
- Designed around the stipulations of the BRC
- All manufacturing processes are electrically driven, including injection moulding, injection stretch-blow moulding and automatic assembly

Bespoke Branding

Our design capabilities

Primary packaging designed around the consumer

We have exceptional experience in creating primary packaging that's perfectly suited to modern medicinal cannabis markets whilst integrating the full spectrum of safety specifications and international standards to be used in other industries to achieve high quality packaging design development.

Primary packaging designed around the consumer

- Define the requirement
- Conceptualise the solution
- Plan the approach
- Develop the product
- Test and perfect the prototype
- Commercialise and take to market

A dedicated team

The specialists that comprise our New Product Development team will assemble to combine their wide-ranging skills. The design, innovation and development of a new project requires input from multiple experts, all working together to solve problems and enhance the final outcome. When you work with DiD, you know that multiple creative designers, development experts and highly skilled engineers are involved in the perfecting of your product.

Initial sketches

We'll show you the embryonic concepts, which are sketches that help us to create a feasibility assessment. Once this is complete, we'll know the most cost-effective route and share it with you

Exploring the concept

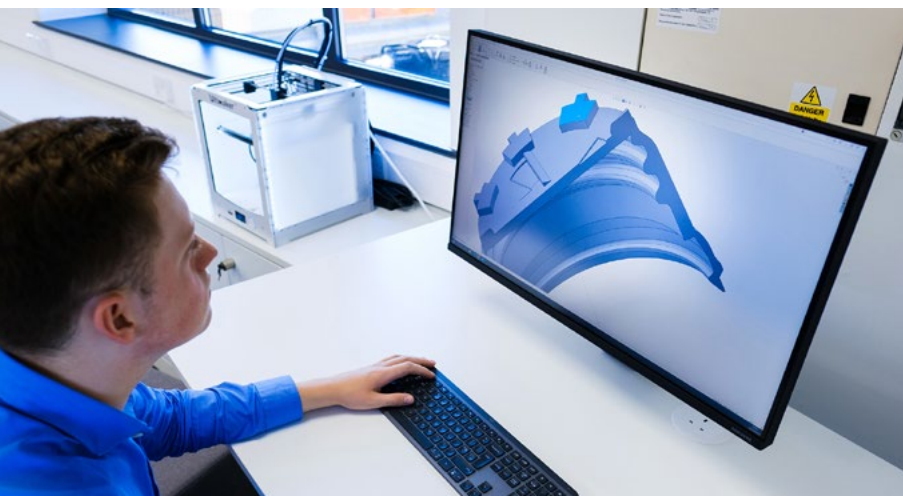

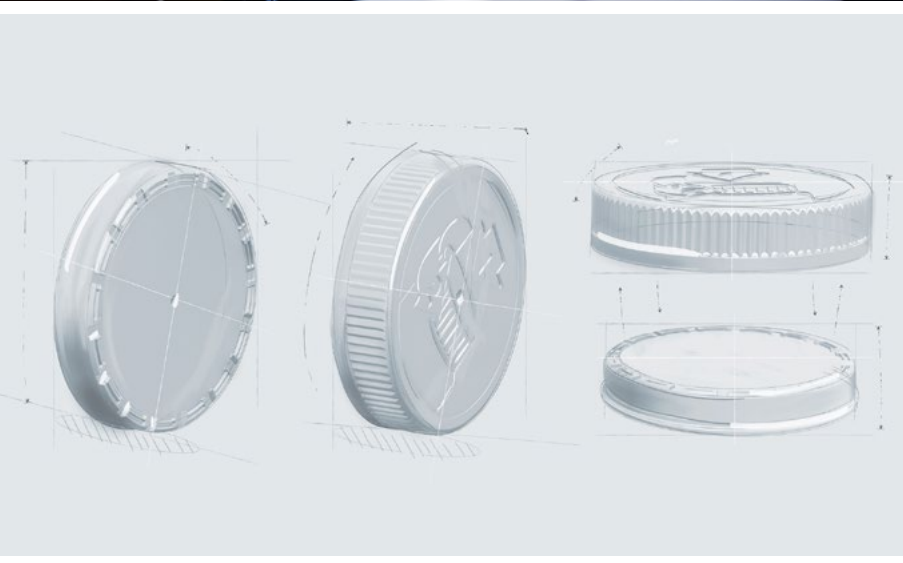

We take you through different options that will determine the best way to achieve functionality and user-friendliness during the testing stage

See for yourself

Our investment in the very best technology systems, software and engineering practices greatly benefits our clients. Through CAD modelling, advanced rendering and 3D printed samples, you can see how the final product will look, feel and function.

The Process

Major investment into our NPD and packaging development departments has driven down costs for our client's packaging development projects

Child Resistant Experts

We are a leading company in specialised containers and closures with F1 status. Our 55 years of experience ensure that your bespoke design will surpass official testing and match regulations within your industry.

We manage the full process of design, from testing via 3D printing to ensure the CR mechanism is valid and commercially viable, to real-time testing via Origin's dedicated testing centre.

It is a specific requirement for harmful substances to be securely stored in packaging that prevents access by children. Origin produces packaging that goes beyond BSEN ISO 8317 and 16 CFR 1700 within Europe and the United States.

These global standards guarantee your newly designed packaging conforms to MHRA and FDA regulatory guidelines. Our packaging gives you the clinical edge.
