

Innovative PCR-based QC solutions for cell cultures, biopharmaceuticals and ATMPs

Mycoplasma · Bacteria & Fungi · Residual DNA · Vector copy number
Viral vector titer · Pyrogens · DNA/RNA

Our vision

Protecting cell cultures worldwide

We empower researchers, scientists, and manufacturers to advance confident research and deliver safe, high-quality biopharmaceuticals.

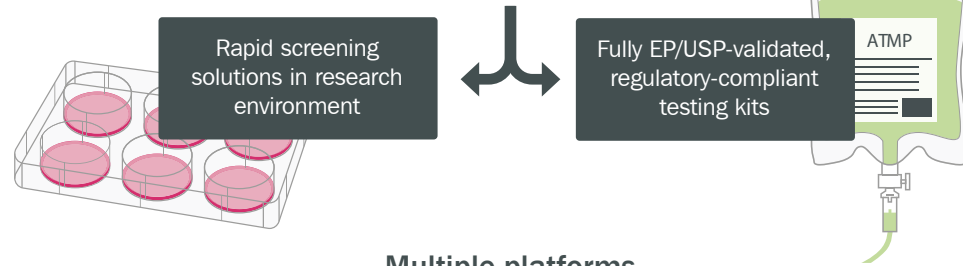

Our mission

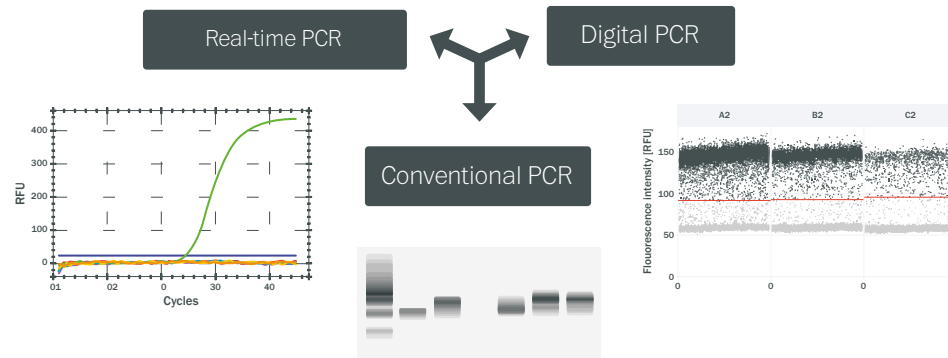

Delivering innovative PCR-based QC solutions

We provide reliable and user-friendly products for microbial contamination control and biopharmaceutical quality assurance – from mycoplasma prevention and detection to advanced ATMP testing. Everything is covered under one roof, from product idea to market.

One portfolio Multiple needs

Multiple platforms

Your support

Backed by over 25 years of expertise, our expert technical support is with you every step of the way – from choosing the right kit and resolving unexpected results to comprehensive validation support.

Your Quality Guarantee

Quality is the heart of our manufacturing process. By managing these services internally, we guarantee our products are of the highest quality, fully traceable, and compliant with international guidelines.

Your own product

Comprehensive contract manufacturing – from product design and fill-finish to quality control, storage, and logistics. Flexible batch sizes tailored to your needs.

Our product portfolio

PCR kits

- Mycoplasma
- Bacteria & Fungi
- Residual host cell DNA
- Vector copy number
- Viral vector titer
- Pyrogens (Monocyte Activation Test)
- PCR & qPCR cyler verification

Extraction kits

- Mycoplasma
- Vector Copy Number
- Lab Monitoring

Reference material

- Mycoplasma Standards
- Quantification Standards

Prevention & elimination reagents

- Cell culture additives
- Mycoplasma elimination

Cleaning & Disinfecting

- DNA/RNA removal
- Mycoplasma removal
- Waterbath additive

Did you know? Minerva Biolabs launched the world's first mycoplasma PCR assay validated according to Ph. Eur. 2.6.7 in 2006.
