

Your partner for ISO intermediates, RSMs, and excipient production

Pharma expertise

- » More than 150 years of experience
- » Deep understanding of industry requirements

Full support

- » Research & process development, pilot and full-scale production
- » Reliable project management, IP-protection, regulatory support & technological excellence

Quality system

- » High quality in compliance with international standards
- » ISO 9001/14001/50001/17025 & IPEC-GMP

Western supplier

- » 9 integrated production plants in Germany enabling complex multi-step syntheses
- » Secure supply chain

Flexibility & Speed

- » Centralized process development and scalable production enable rapid market entry and flexible volumes

Our advanced technology toolbox for your complex molecules

Cutting-edge expertise in metathesis, fluorination, organometallic chemistry, bio-catalysis, flow chemistry, high-pressure hydrogenation, and many more

Handling of challenging reagents like phosgene, hydrazine, hydrogen peroxide, and many more

- » Extremely broad permit
- » Kilo lab: 1kg – 100kg
- » Pilot production: 100kg – 5t
- » Commercial scale: 5t – 5,000t
- » Temperature: -100°C – 250°C
- » Pressure: up to 200 bar

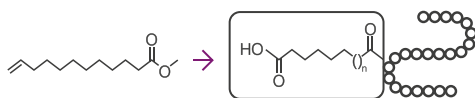

Our co-innovation model to support your project development

Broad access to specialty labs: High pressure, flow-chemistry, phosgene, mini plants, engineering/technical

Tailored for **established pharma** and **start-ups**

- » >75 Process development experts
- » 13 process development labs
- » Scale: g - kg

GLP-1 blockbusters for diabetes and obesity accessible via metathesis enabled building blocks

Unsaturated fatty acids

C_x-Chain

Poly-peptide

- » 5 years of experience on multi-ton scale
- » Safe ethylene off-gas handling
- » Use of selective catalysts
- » Network to secure key raw materials
