Hoary willow herb extract (<i>Epilobium parviflorum</i>)	100 mg
Zinc	10 mg

Softgel capsules enable better and faster absorption

Dosing: one capsule daily

- Prosturo® Neo is recommended for men who want to effectively and safely maintain the normal function of the prostate and the urogenital tract.
- Proven to improve quality of life and relieve symptoms caused by an enlarged prostate.
 - **Difficulty urinating**
 - **Frequent urination and incomplete bladder emptying**
 - **Burning sensation during urination**
- The synergistic effect of African plum extract and willow extract helps improve sexual health.

Willow herb possesses antibacterial, anti-inflammatory and antioxidant properties. It helps cleanse the body, supports urogenital tract health (urinary bladder, kidneys, prostate – especially in relieving symptoms associated with BPH) while helping reduce various urological problems and preventing the growth of *Escherichia coli* bacteria.

Studies have shown that the active compounds in willow herb inhibit the activity of the enzyme, particularly 5-alpha reductase (the enzyme responsible for converting testosterone into the potent androgen dihydrotestosterone (DHT), a hormone involved in normal male reproductive function).

Excessive levels of DHT may contribute to prostate enlargement (BPH). Pumpkin seed extract helps regulate BPH by blocking the 5-alpha reductase enzyme. Zinc contributes to normal immune function and in cases of enlarged prostate may help reduce prostate enlargement while supporting increased sperm motility.

Saw palmetto is used in benign prostate enlargement and prostatitis. It contains a high concentration of free fatty acids that are important for proper prostate function.

One of its key active components is beta-sitosterol, which supports prostate health, strengthens immunity and helps lower cholesterol. Saw palmetto reduces the production of dihydrotestosterone (DHT), thereby helping to reduce prostate enlargement.

It provides effective results without aggressively reducing prostate size.

African plum is used to improve symptoms of benign prostatic hyperplasia and support sexual function. It contains various bioactive compounds, especially phytosterols which have anti-inflammatory properties.

Phytosterols contribute to improving prostate function and reducing prostate enlargement thereby relieving urinary problems. Regular use of African plum may reduce symptoms such as frequent urination and incomplete bladder emptying, contributing to better quality of life in middle aged and older men.
