Serialization and Tamper Evident Machine

SoftGroup® SaTT STE is specially designed machine for serialization and tamper evidence in the pharmaceutical secondary packaging line following the latest GMP standards.

This serialization machine simultaneously allows printing and verifying serialization data and sealing the insertion flaps with the tamper-evidence labels on both sides protecting the production against counterfeits.

## MAIN FUNCTIONALITIES

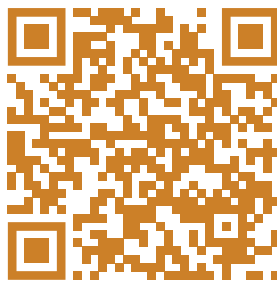

- Dynamic carton marking
- Printing and verifying 2D Data Matrix codes and human-readable part including specific requirements for cryptographic protection
- Verifying and grading the printed information
- Reworking station application – possibility to check the barcode string and to decommission the serial number with the respective reason for decommissioning
- Providing protection for cartons on both sides of the flaps against manipulation through a compact dispenser for sealing labels.

## KEY FEATURES

- Few minutes for reconfiguration of different carton's formats
- The highest quality of the supplementing equipment
- Large touchscreen display
- Possibility for both side printing of serialization data and covering print up to 10 rows
- 2-sides applying of tamper evidence labeling
- Highly compact design which allows integration into an existing production line
- User-friendly interface
- This module ensures maximum format flexibility of cartons and labels options
- Self-served stand-alone machine
- Can be an integrated part of an automated packaging line or serve as a stand-alone machine with manual feeding
- High production speed: up to 200 cartons/min
- Software and hardware could be adapted according to the requirements and standards for different markets as Europe, Russia, CIS countries and MENA region, North Africa, etc.
