

Aspen API. **Steroids**

Excellence in Steroid Manufacturing

June 2026

Clascoterone and Segesterone acetate, new additions to our development portfolio

Aspen API Steroids

With over 75 years of expertise in steroid manufacturing, Aspen API stands as a trusted leader in the pharmaceutical industry. Leveraging a robust global network for advanced steroid intermediates and backed with a strong track record of uninterrupted supply, we ensure reliable and high-quality supply chains.

Clascoterone and Segesterone acetate

We have recently added Clascoterone and Segesterone acetate to our development portfolio. For Segesterone acetate, we have eliminated the use of mercury salts from the originator route and streamlined the synthesis process, enhancing safety and sustainability. For Clascoterone, our optimized route significantly reduces solvent volumes and Process Mass Intensity (PMI), enabling a competitive price point and a more sustainable production process.

Our customers are our partners

We are committed to sustainability, safety and operational excellence and have a demonstrated track record in regulatory support, knowledge and experience. Our innovative processes are patent-free and meet the highest industry standards. As a mid-size company, we guarantee full customer focus. Partner with Aspen API as your one-stop shop from lab to commercial production, covering analytical development, process development, powder processing and registration.
