

# Testo Saveris 1

## Continuous & Remote Wi-Fi Monitoring System

Temperature, Humidity, Differential Pressure, Carbon Monoxide, + More!

- ✓ Easy Web-Based Data Access
- ✓ 24/7 Alerts
- ✓ No External Infrastructure
- ✓ Comprehensive Reporting
- ✓ Hot-Swap Calibrations
- ✓ 21 CFR & GMP Compliant
- ✓ Enterprise Scalability
- ✓ Expert Support & Services

# Environmental Monitoring: Testo Saveris 1

Testo is a global leader in the creation of metrology devices. With over 65 years of experience, Testo offers cutting-edge continuous monitoring systems which help streamline the monitoring of different environmental parameters to help meet GxP compliance, provide alerts, and create real time visibility across the entire facility.

## testo Saveris 1: All information at a glance – with a single system.

The complete solution testo Saveris was developed together with experts from industry and research and development. Highly precise measurement technology, intuitively operable software and comprehensive services help you to carry out your work quickly, efficiently and in compliance with current regulations.

**testo UltraRange radio technology**  
With this technology, you use a self-sufficient radio network via encrypted, proprietary signals with outstanding range and signal stability in closed rooms.

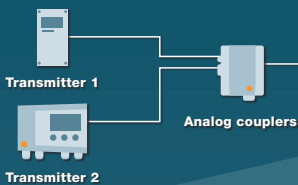

**testo Saveris Base V 3.0**  
The core component of testo Saveris manages measurement data from up to 3,000 channels, evaluates it and generates alarms if any limit value violations should occur.

**REST API**  
It allows data from the monitoring system to be retrieved quickly and easily for transfer to other systems, such as your own building or laboratory management system.

**testo Saveris PRO software**  
All measurement data is compiled, visualized and documented seamlessly. At the same time, the software enables detailed analysis, graphic/tabular presentation and evaluation of the data. The alarm management system can be customized. Reports can be configured automatically or manually.

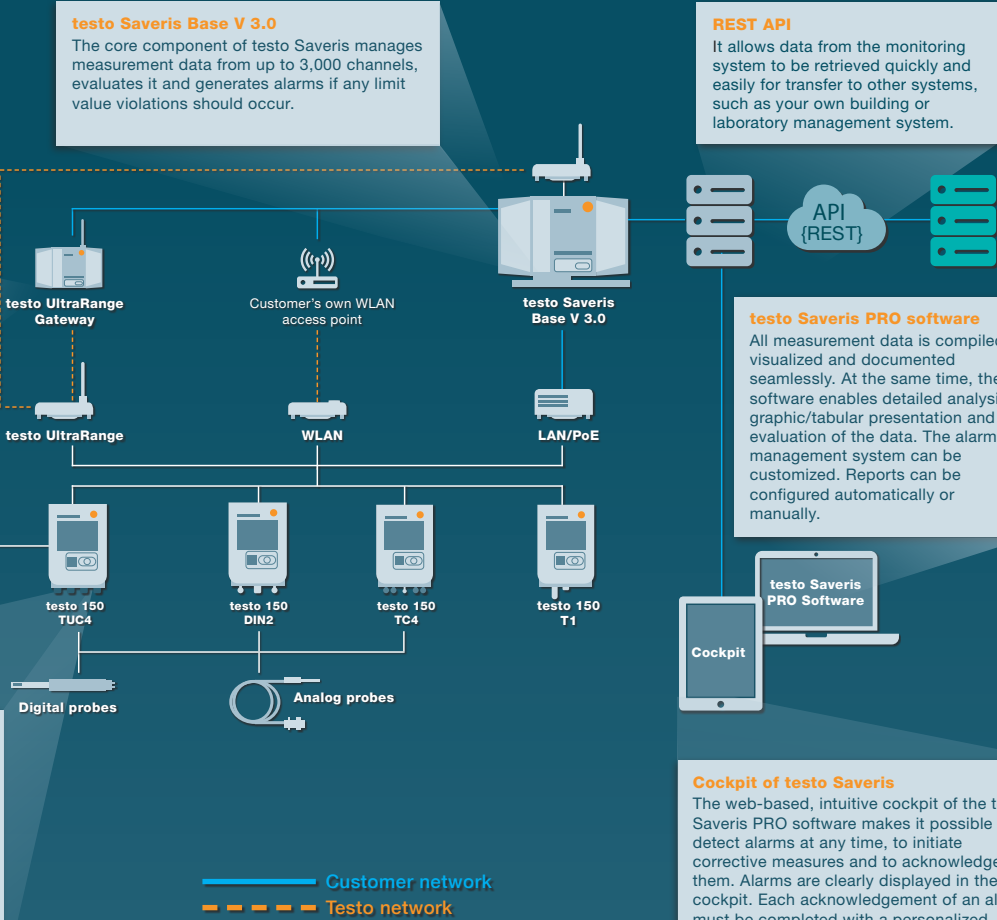

**Cockpit of testo Saveris**  
The web-based, intuitive cockpit of the testo Saveris PRO software makes it possible to detect alarms at any time, to initiate corrective measures and to acknowledge them. Alarms are clearly displayed in the cockpit. Each acknowledgement of an alarm must be completed with a personalized, digital signature as well as a mandatory comment on the event.

**Modular data loggers**  
With the help of the different communication modules, the testo 150 data logger modules can be integrated into any existing communication infrastructure (WLAN, LAN). The optional testo UltraRange wireless technology allows the secure transfer of measurement values over long distances.

**Digital probes with Plug & Play function**  
The digital probes of the testo 150 data logger module series can be exchanged in seconds during continuing operation. There are no interruptions in the measurement.
