Valentis | Smarter Nutrition for a Fast-Moving World

The future of liquid nutraceuticals comes to life at Valentis.

For more than a century, Valentis has elevated the standard of liquid supplements through strong absorption science, a deep respect for nature and a belief that natural ingredients can help people become stronger, recover faster and live better.

Over time, this legacy has shaped Valentis into one of the largest food supplement manufacturers in the Baltic States and a full-scale production partner with in-house laboratory testing, primary and secondary packaging and a strong R&D engine.

“Our objective is to create healthy moments in people’s lives through the products we create,” says Linas Kamarauskas, Business Development Manager.

Science Behind the Difference

Valentis pursues its goal by bringing together nature and science.

Liquid formats often rely on clean raw materials, balanced dosing, multi-year stability and great taste. The pursuit for excellence in this led Valentis to one of its breakthroughs, the patented Miosol™ microencapsulation technology.

- Using phospholipid-based microcapsules that mimic natural cell structures, Miosol™:
- shields active ingredients for maximum stability
 - protects nutrients from stomach acidity
 - enhances absorption rates by up to six times
 - improves the stability of light- and oxygen-sensitive compounds
 - delivers fat- and water-soluble substances in fully dissolved, highly bioavailable form

For partners, this becomes a powerful differentiator, offering modern, on-the-go consumers liquid nutraceuticals that outperform traditional options.

Valentis has already helped shape many winning products, particularly in the Baltic region. FJORD Omega, for example, has rapidly become a leader in the pharmaceutical omega category in Lithuania and continues to gain strength in other European markets. The formula stands out for its purity, great taste and precise composition, supported by independent batch testing. Fish oil is sourced only from wild fatty fish with naturally high Omega-3 levels.

A Time-Tested Name

A scientific foundation of this caliber didn’t appear overnight.

Valentis traces its roots to 1919 when the Institute of Hygiene in Lithuania established a Pasteur station to produce rabies vaccine. Beginning as a modest scientific endeavour, it gradually evolved into a network of pharmaceutical enterprises dedicated to health innovations.

In 2003, several of these entities came together under one name. Valentis, meaning healthy and strong, reflects its heritage and ambitions.

Its growth has been organic. With more than 250 formulas in active production and over 18 million products manufactured annually for more than 40 countries, Valentis continues to advance global well-being in tangible ways.

Innovation grew faster as the science was kept close to home. A highly skilled in-house R&D team of PhDs designs Valentis formulas. Their work drives every product decision, from improving absorption to maintaining the stability and effectiveness of nutrients over time.

Quality, the Non-Negotiable

A+ quality wins trust. Valentis facilities meet the strictest international standards and hold certifications such as GMP, ISO 9001, ISO 13485, IFS and HACCP. These frameworks support cleaner, tightly controlled production. Nothing is shipped without passing through the company’s laboratory checks and, when necessary, independent third-party verification.

Clients stay loyal when collaboration feels effortless. Valentis earns that loyalty with a team known for making fast decisions, communicating clearly, being willing to adapt and offering steady support from concept through completion.

Its remarkable range of formulations also helps clients adapt to different consumer needs and to build diverse, competitive portfolios.

With its blend of heritage, scientific rigour and a modern perspective on wellness, Valentis stands as a category-defining innovator, delivering nutraceutical solutions that set a new benchmark for efficacy and natural wellbeing. **LS**
