**VIRO
STOP**

Stop infections naturally with VIROSTOP

Protective barrier against viruses causing
upper respiratory infections

virostop.info

NEW: VIROSTOP FORTE

THE OPPORTUNITY

Natural cold & flu care is growing three times faster than the category.

\$43B

Global cold & flu OTC market in 2026, growing ~5.5% a year

~13%

Yearly growth of natural and herbal cold & flu products – the fastest-growing segment

#1

Herbal extracts rank as the fastest-growing sub-segment

Source: market research aggregated from Mordor Intelligence, FactMR, Grand View Research, Statista (2024–2026).

WHAT IS VIROSTOP

A patented blend of five plant extracts that forms a protective film on the mucosa of the upper respiratory tract.

Rich in polyphenols, the extracts create a physical barrier that traps and neutralizes viruses before they can attack the cells. Only natural active substances.

Cistus creticus

Polyphenol-rich core

Purple echinacea

Mucosal immunity support

Common sage

Antimicrobial support

Citrus bioflavonoids Synergistic action

Acerola (Barbados cherry)

Natural vitamin C

HOW IT WORKS

A physical barrier, not a symptom mask.

01

Coat

The polyphenols spread over the mucosa of the mouth, throat or nose and form a continuous protective film.

02

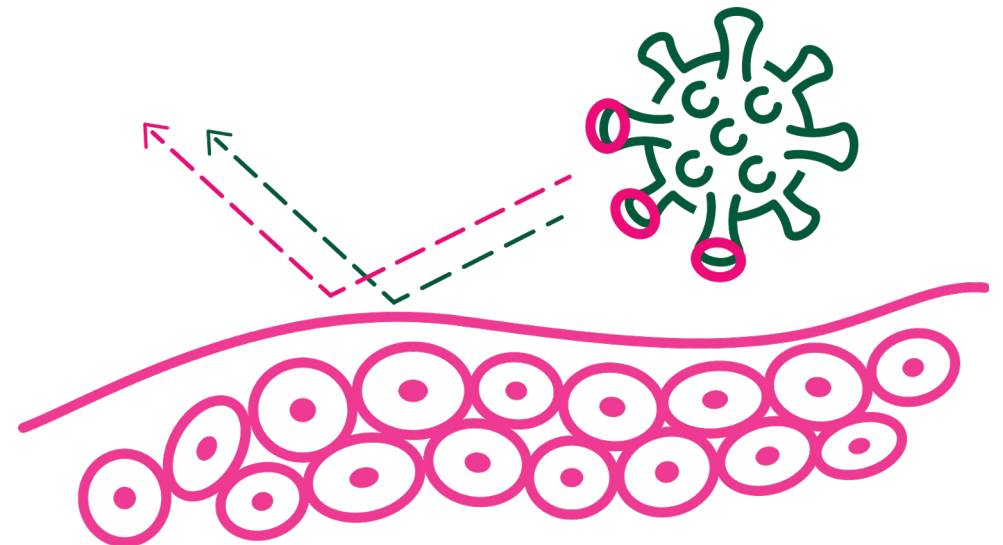

Trap

The film binds to the surface proteins of the viruses and mechanically blocks them from attaching to the cells.

03

Protect

Viruses are neutralized in the film – in prevention and at the first symptoms.

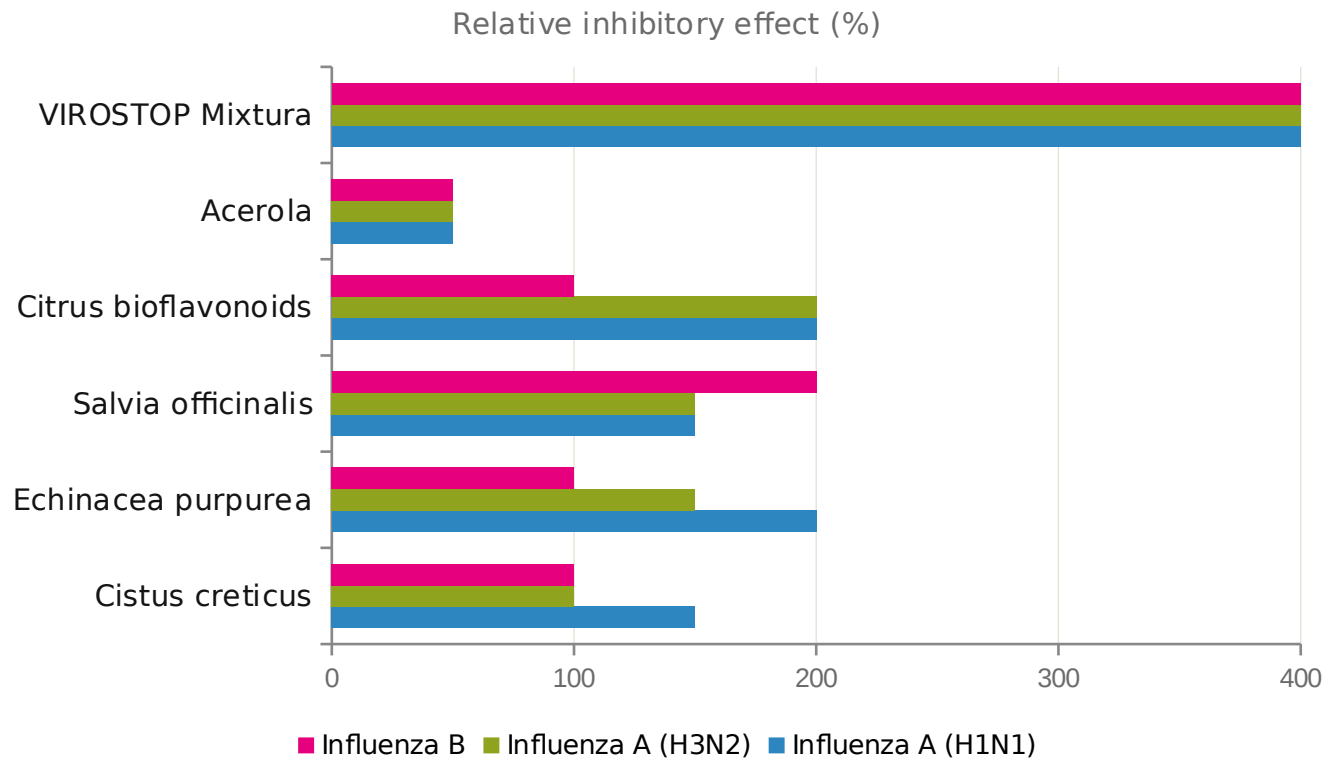

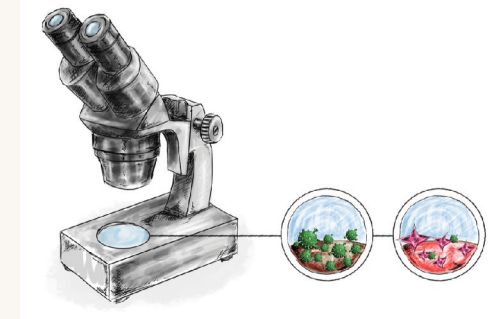

The protective film stops viruses before they reach the cells.

VIROSTOP is a medical device: its principal action is physical, on the surface of the mucosa.

THE EVIDENCE · IN VITRO STUDY

Together, the five extracts work up to twice as hard.

The combined VIROSTOP Mixture inhibited seasonal influenza strains **up to twice as effectively** as any single extract.

The formulation also inhibited SARS-CoV-2 in cell culture – a broad-spectrum effect driven by the synergy of different polyphenol structures, without cytotoxicity.

In vitro study in cell culture: influenza A (H1N1, H3N2), influenza B and SARS-CoV-2.

WHEN TO USE

All through the cold and flu season.

Prevention

When the risk is higher: someone at home, at school or at work is ill, in crowded places, when traveling.

At the first symptoms

At the first scratch in the throat, sneezing or dry nose – the film helps stop viruses from attacking nearby cells and supports the recovery of the mucosa.

Family-friendly: sprays from 3 years, pastilles from 4 years.

THE VIROSTOP FAMILY

Four products, one brand for the whole household.

Oral Spray

30 ml · protective film in the mouth and throat

NEW

Oral Spray FORTE

10 ml · reinforced with AVP3 for a longer-lasting film

Nasal Spray

20 ml · protective film on the nasal mucosa

Pastilles

20 pcs · citrus, mint and forest fruit

THE RANGE

NEW IN THE RANGE

VIROSTOP FORTE Oral Spray

- Peptide-enhanced version of the original oral spray: the same patented polyphenol blend and physical barrier, reinforced with AVP3 and organic glycerin.
- The world's only oral spray with AVP3 – a stronger, longer-lasting protective film on the mucosa.
- Organic glycerin for moisture and longer adhesion.
- Only natural active substances, pleasant mint herbal taste.

USE

- Start using it as soon as you experience a scratchy throat, sneezing, or other early symptoms of flu or cold.
- Tip: apply in the evening after brushing teeth for the best overnight effect.

WHY PARTNERS CHOOSE VIROSTOP

A differentiated, pharmacy-ready range.

Natural actives

Plant-based active ingredients with proven efficacy – a clear gap on cold & flu shelves.

Works at the source

A physical barrier against viruses, rather than only suppressing symptoms.

For the whole family

Sprays from 3 years, pastilles from 4 – widely trusted by parents.

Proven in market

Almost a decade of strong sales in Central Europe.

Certified

Medical devices certified under the EU MDR, and registered with the UK MHRA.

Innovation

NEW FORTE: the world's only oral spray with AVP3.

Let's bring **VIROSTOP** to your shelves.
