

FOR IMMEDIATE RELEASE

## Eldon James Revolutionizes Bioprocessing Speed with the Launch of BioKlik™ Single-Use Assemblies at Interphex

### Highlights at a glance:

- Off-the-shelf availability eliminates custom engineering lead times— rapid shelf to system deployment
- Integrated SeriesLock Xgen® and SeriesLock® quick disconnects for secure, sterile connections
- Intuitive click-to-connect design minimizes human error and contamination risk
- Reduced batch-to-batch downtime accelerates speed-to-market
- Designed for modern labs, cleanrooms, and large-scale production suites

**APRIL 21, 2026 | NEW YORK, NY** – In the fast-paced world of biopharmaceutical manufacturing, efficiency and sterility are the cornerstones of success. Eldon James is proud to announce the launch of **BioKlik™**, a breakthrough line of off-the-shelf, single-use multi-connect assemblies designed to replace the time-intensive configurations of the past.

### SOLVING THE SPEED-TO-MARKET CHALLENGE

Traditional fluid management assemblies routinely require weeks or months of custom engineering, creating bottlenecks that delay critical production timelines. BioKlik™ changes the equation entirely. By offering a ready-to-deploy portfolio of assemblies, Eldon James enables facilities to scale production rapidly without compromising on quality or compliance.

*“The biopharma industry cannot afford to wait. Every day spent waiting on custom assemblies is a day lost in the race to deliver therapies to patients,” said Marcia Coulson, President of Eldon James. “BioKlik™ was designed from the ground up to give manufacturers the responsiveness they need, backed by the quality and sterility assurance they demand.”*

### CLICK-TO-CONNECT: SIMPLICITY WITHOUT COMPROMISE

By integrating the high-performance SeriesLock Xgen® and SeriesLock® quick-disconnect couplings into a ready-to-use solution, BioKlik empowers bioprocessing facilities to bypass long lead times, enhances operational workflows allowing for rapid production scaling without compromising stringent quality standards.

Engineered for seamless integration, these assemblies provide a robust and reliable fluid management solution that simplifies the transition between processing steps. By reducing complex assembly requirements and slashing downtime between batches, BioKlik serves as an essential tool for modern labs and production suites driven by the urgent need for speed-to-market and operational excellence.

With BioKlik, Eldon James continues to set the standard for innovation, helping manufacturers focus on what matters most: delivering life-saving therapies to patients faster.

## **WE ARE CHANGING THE WAY YOU CONNECT®**

### **About Eldon James Corporation**

Eldon James is a woman owned, leading manufacturer of specialized fluid management components, providing innovative, high-quality, and reliable plastic fittings and tubing for the medical, biopharmaceutical, and laboratory industries. Committed to excellence and technical advancement, Eldon James supports global manufacturing with solutions that prioritize safety, sterility, and performance.
