About us

Laboratoire L'IDEAL Parisien, a Polish CDMO, producer of highest quality products

We are a manufacturing company with over 25 years of experience in production:

- medical devices
- cosmetics
- dietary supplements
- products for children
- biocidal products
- veterinary products

We can be proud of cooperating with well-known, worldwide cosmetics and pharmacy companies.
Our products and services are characterized by its acknowledged reputation and quality.
Date of establishment – 1st of September 2001.

Headquarter
Ogrodowa 8, 32-064 Niegoszowice, Poland

Vaginal globules

Medical device class IIb (MDR) CE 2274
Shelf life: 36 months
10 mg of HA per ovule
General information and indications for use:

Intended for women of childbearing age and menopausal women to help relieve discomfort and dryness, tension, itching, and burning of the vaginal mucosa linked to:

- bacterial vaginosis
- atrophy of the vaginal mucosa,
- oestrogen deficiency,
- dyspareunia (pain during intercourse),
- long-term stress.

Thanks to its lactic acid and glycogen content, the product helps to lower the pH and restore the natural acidic environment of the vagina, making it suitable for the treatment of bacterial vaginosis (BV).
As the medical device has an acidic pH, it affects the microbiome of the female reproductive system, normalising it, and can therefore be used as a supplement to therapies used in the treatment and prevention of endometriosis.
The use of the product supports the natural microbiological balance of the vagina which promotes the growth of beneficial bacteria such as Lactobacillus, which inhibits the growth of pathogenic bacteria such as:

- Gardnerella vaginalis
- Streptococcus sp., Enterococcus sp., E. coli, Enterobacter, Trichomona (pathogenic bacteria migrating from the vulva and anal area)
- fungi of the genus Candida

In order to help moisturize the vaginal epithelium:

- BV symptoms relief and treatment
- after surgical and gynecological procedures,
- in case of abrasions or other minor mechanical injuries to the vaginal mucosa,
- after labour,
- after chemotherapy, radiotherapy, cryotherapy,
- after laser treatments,
- in case of changes caused by the use of hormonal drugs;
- in the perimenopausal period,
- recommended for prevention of adverse changes in the vagina's microbial flora and pH (e.g. caused by travelling, swimming pools, sauna, fitness, antibiotics) by moisturizing and maintaining the vagina's natural pH,
- product reduces unpleasant vaginal odor.

Contains:

Active substance:
Sodium Hyaluronate - highly moisturizing properties.
Excipients:
Lactic acid 90 %
Glycogen
Vitamin E

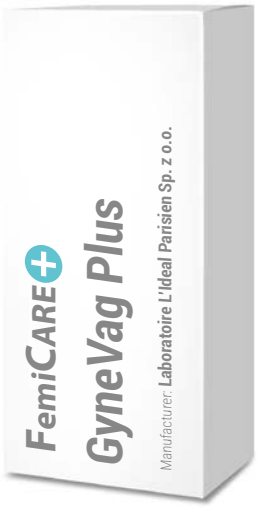

A non-hormonal product.
Does not contain PEG, parabens or detergents including SLS, SLES.

Packaging:

Blister containing 1 globule (free sample).
Blister containing 2 globules (free sample).
Blister containing 5 globules.
Blister containing 6 globules.
Blister containing 7 globules.
2 Blisters with 5 globules each (10 globules in total).
3 blisters with 5 ovules each (15 ovules in total)
Each globule weighs approx. 1.6 g

Intended to be used from:
Women in their reproductive years and during menopause.

Vaginal intimate gel

Medical device class IIb (MDR) CE 2274
Shelf life: 36 months
General information and indications for use:
Intended for women in their reproductive years and during menopause, in order to alleviate the symptoms of vaginal dryness (discomfort, tension, itching, burning of vaginal mucous membranes) related to:

- bacterial vaginosis
- atrophy of vaginal mucous membranes,
- deficiency of oestrogen,
- long term stress.

Thanks to its lactic acid and glycogen content, the product helps to lower the pH and restore the natural acidic environment of the vagina, making it suitable for the treatment of bacterial vaginosis (BV).
As the medical device has an acidic pH, it affects the microbiome of the female reproductive system, normalising it, and can therefore be used as a supplement to therapies used in the treatment and prevention of endometriosis.
The use of the product supports the natural microbiological balance of the vagina which promotes the growth of beneficial bacteria such as Lactobacillus, which inhibits the growth of pathogenic bacteria such as:

- Gardnerella vaginalis
- Streptococcus sp., Enterococcus sp., E. coli, Enterobacter, Trichomona (pathogenic bacteria migrating from the vulva and anal area)
- fungi of the genus Candida

In order to help moisturize the vaginal epithelial surface:

- BV symptoms relief and treatment
- after surgical and gynecological procedures,
- after abrasions or other minor mechanical traumas of the vaginal mucous membranes,
- after labour,
- after chemotherapy, radiotherapy, cryotherapy,
- after laser treatments,
- at the occurrence of changes resulting from the use of hormonal drugs,
- during the perimenopausal period,
- recommended for protection from negative changes in the vagina's microbial flora and pH (e.g. caused by travelling, swimming-pools, sauna, fitness, antibiotics) through moisturising and maintaining the vagina's natural pH,
- alleviates abrasions and helps moisturize the vaginal mucous membranes which promotes discomfort reduction during sexual intercourse,
- reduces unpleasant vaginal smell.

Contains:
Active substance:
Sodium Hyaluronate - highly moisturizing properties.
Excipients:
Lactic acid 90%

Odourless.
A non-hormonal product.
A hypoallergenic product.

Does not contain PEG, parabens, detergents, including: SLS, SLES.
Simple and hygienic application of the product ensures high comfort of use.

Packaging:
Long nozzle tube: 5 ml
A single package of the product contains: disposable applicators with gel and instructions for use
Available packaging: 1 applicator (free sample), 2 applicator (free sample), 3 applicators , 5 applicators, 6 applicators, 7 applicators , 10 applicators

Intended to be used from:
Women in their reproductive years and during menopause.

Water based lubricant

Medical device class IIb (MDR) CE 2274
Shelf life: 36 months
General information and indications for use:

- ease sexual intercourse with impaired penetration (including vaginal dryness) also with the use of condoms,
- relieve pain within the genitals during sexual intercourse,
- relieve the symptoms of vaginal dryness leading to friction and epithelial damage of the intimate area during sexual intercourse,
- help ease gynecological examinations (e.g. rectal temperature measurements).

Does not stain the underwear
Unscented
Non-hormonal product
Hypoallergenic product
Does not contain PEG, parabens, detergents including:
SLS, SLES

Gel can be used depending on needs, several times a day, regularly, with no age restrictions.
The product can be used in contact with latex, polyurethane and polyethylene condoms.
Gel can be applied directly on the condom.

Packaging:

Tube: 30ml, 50 ml, 75 ml, 100 ml, 150 ml, 250ml
Bottle with pump: 30 ml, 50 ml, 100 ml, 150 ml, 250 ml, 500 ml 1000 ml
Sachets of 5 ml packed with 5, 10, 15, 20, 25, 50 pcs

Intended to be used from:
No age restrictions.

LABORATOIRE
L'IDÉAL

Silicone based lubricant

MDR approved
Shelf life: 36 months

CE 2274

Thesilicone lubricant, a medical device, provides protection of intimate areas during sexual intercourse. The product reduces the friction force at the surface boundary and thus protects the external genital organs and vagina during sexual intercourse.
The product can be used during anal intercourse. It is also intended for use during gynecological examinations, vaginal temperature tests and rectal and transrectal examinations, because it acts as a lubricant, thus contributing to the protection of intimate areas and reducing the feeling of discomfort during these examinations.

Indications for use of the product

1. prophylactically before sexual intercourse to prevent abrasions and damage to the intimate areas and
   - vaginal mucosa - applies to women
   - rectal mucosa - affects women and men
2. before sexual intercourse, when additional lubrication is required during sexual intercourse, also when the amount of natural mucus is insufficient, penetration is difficult and therefore discomfort or pain is felt in the intimate areas;
3. to relieve pain in the genital area during sexual intercourse and during gynecological examination. Vaginal dryness or insufficient vaginal secretion may cause pain in the genital area;
4. to alleviate discomfort during gynecological examinations and intravaginal temperature measurement.
5. To relieve discomfort during rectal examination or examination through the rectal canal.

Does not contain the N9 ingredient, i.e. spermicide

Therefore, it can be safely used on the anal mucosa during intercourse or rectal examination

The latest research shows that due to the different structure of the vaginal mucosa and the anal mucosa, not all vaginal lubricants can be safely used rectally.
Spermicides damage the anal mucosa, increasing the risk of injury, but damaged mucosa is also more susceptible to virus infection.

Due to its composition, our silicone lubricant can be used safely and long-term

Intended to be used from:

No age restrictions.

Bottle with pump:
30 ml, 50 ml, 100 ml, 150 ml

Sachets of 5 ml

Sucralphate Rectal Gel For Hemorrhoids

Medical device class IIB MDR
Shelf life: 24 months

CE 0197

Purpose
Sucralphate Rectal Gel for anal and rectal complaints of internal and external hemorrhoids. Intended to relieve symptoms associated with damage to the anal mucosa and surrounding areas, including fissures, cracks, and eczema. It can also be used after surgical procedures, diagnostic tests, and in cases of irritation following radiotherapy or chemotherapy.

Active Ingredients
The main active ingredient is sucralfate, a non-absorbable aluminum salt of sucrose octasulfate.

Mechanism of Action
Sucralfate forms a protective barrier on damaged tissue by binding to positively charged proteins on the surfaces of mucous membranes and skin. This barrier protects against external factors, such as infectious microorganisms, and supports the natural healing and regeneration processes.

Benefits
Regular use of Sucralphate Rectal Gel provides relief from hemorrhoids, persistent itching, burning, and discomfort in the anal area, accelerates the healing of postoperative wounds, reduces pathogen colonization, and decreases the risk of developing inflammatory conditions.

Pregnant women should use the product for up to 7 days.

Packaging:
Available in applicators and tubes: 1, 5, 7, 10 pcs

Sucralphate Rectal Suppositories For Hemorrhoids

Medical device class IIB MDR
Shelf life: 24 months

CE 0197

Purpose
Sucralphate Suppositories for anal and rectal complaints of internal and external hemorrhoids. Intended to relieve symptoms associated with damage to the anal mucosa, including hemorrhoid, fissures, crack and eczema. They can also be used to prevent irritation after radiotherapy and chemotherapy.

Active Ingredients
The main active ingredient is sucralfate, a non-absorbable aluminum salt of sucrose octasulfate.

Mechanism of Action
Sucralfate acts locally, forming a protective barrier on damaged tissue by binding to positively charged proteins on mucous and skin surfaces. This barrier limits pathogen colonization and supports natural healing and regeneration processes.

Benefits
Using Sucralphate Suppositories relieves from hemorrhoids, itching, burning, and pain in the anal area, accelerates postoperative wound healing, reduces the risk of bacterial infections, and supports the natural repair processes of tissues.

Pregnant women should use the product for up to 7 days.

Packaging:
Blister containing 5 suppositories
Blister containing 7 suppositories

Hyaluronic Acid Rectal Suppositories
For Hemorrhoids, urology and prostate support

Medical device class IIB MDR CE 0197
Shelf life: 24 months

Purpose
Hyaluronic Acid Suppositories are intended to relieve symptoms of damage to the anal mucosa and surrounding areas, including hemorrhoids, fissures, and irritations after surgical procedures, radiotherapy, and chemotherapy.

Active Ingredients
The main active ingredient is the sodium salt of hyaluronic acid, which has moisturizing and bioadhesive properties.

Mechanism of Action
Hyaluronic acid forms a protective layer on the surface of mucous membranes, providing moisture, protection from external factors, and supporting natural healing and regeneration processes. This protective layer also limits pathogen colonization and reduces the risk of bacterial infections.

Benefits
Regular use of Hyaluronic Acid Suppositories provides relief from hemorrhoids, itching, burning, and pain in the anal area, accelerates wound healing, improves tissue hydration, which is particularly important for older individuals, and reduces as well the risk of developing hemorrhoids and other inflammatory conditions.

TÜV NORD
TÜV NORD Polska Sp. z o.o.
PN-EN ISO 13485

2g suppository

Indications: during chemotherapy, radiotherapy or a combination of both therapies to
alleviate and reduce symptoms of radiation proctitis/rectal inflammation;
- for the protection of the anal tissues in persistent constipation to reduce the sensation of friction during defecation, which protects against irritation and congestion in the anal area, providing relief;
- for physiological rectal lubrication in the elderly, which improves the normal function of the anus (sphincter);
- in adults at risk of developing haemorrhoids (overweight people, people with a sedentary lifestyle, laxative users, people who practice anal intercourse).

The protective layer alleviates irritation of the anal/rectal mucosa:
- for irritation in men undergoing transrectal prostate biopsy
- in case of irritation of the anus caused by environmental factors (underwear, hygiene products, etc.).
- for anal/rectal irritation after anal intercourse.

The protective layer acts as a lubricant and contributes to better functioning of the tissues supporting the rectum/rectum by improving the properties of the connective tissue. The genitourinary tract and the rectum/rectum are in close proximity and closely linked to the lifting muscle. Visceral discomfort is poorly localised and pelvic floor dysfunctions can impair urogenital and rectal function; indeed, these disorders have much in common and there is an overlap of symptoms. Therefore, a hydrating protective layer in the anus/rectum contributes to symptom relief:
- For chronic prostatitis (prostate, prostate), benign prostatic hyperplasia and interstitial cystitis, but also for bladder pain rectum/rectum.
- For symptoms of prostatitis such as pain occurring in the perineal area, mainly rectal/anal. The device can be used in combination with other therapies to treat both bacterial and non-bacterial prostatitis. The use of the device in this situation is a therapy aimed at relieving symptoms and providing a better quality of life. The device relieves symptoms associated with both chronic prostatitis and urinary symptoms. The direct action on the rectum/rectum and the effect of the protective layer of hyaluronic acid on perineal tenderness may facilitate an earlier therapeutic effect.
- For symptoms of pelvic inflammation and chronic pelvic pain in women, especially with lower urinary tract symptoms, where there is often an overlap of pain associated with urine collection and urination, and for chronic inflammation of anatomical structures anatomically and functionally related to the uterus: fallopian tubes, ovaries and supporting tissues.

The product has a protective and moisturising effect on the anal/rectal mucosa.

Packaging:
Blister containing 5 suppositories
Blister containing 7 suppositories
Two blisters of 5 suppositories each (10 suppositories)

VirusPrevention Solutions

MDR approved
Shelf life: 24 months

NASAL SPRAY and THROAT SPRAY

Medical devices intended for everyday use. The product can be used both prophylactically to support the proper physiological functions of the nasal mucosa, as well as in the event of viral infections such as: influenza caused by influenza B and C viruses, colds caused by coronaviruses. The medical device also helps protect against potential infections

Both products are gel in the form of a spray that protects against viruses, relieves the symptoms of infection and shortens its duration. The product is intended for adults, adolescents and children over 1 year of age.
Gel creates a protective layer on the nasal mucosa that mechanically blocks the entry of viruses into cells, thus protecting against infection and transmission of viruses to healthy people.
In the event of an infection, the spray blocks the multiplication of viruses, thus alleviating the symptoms of the disease and shortening its duration.
Products are indicated for adjunctive use in the treatment of rhinitis, paranasal sinuses or allergic rhinitis (nasal only).
The package contains 20 ml of gel, which translates into approximately 200 doses.

Contains:
Iota-carrageenan: A natural polysaccharide obtained from red marine algae that forms a protective layer on the surface of the mucous membrane, protecting it against viruses, irritation and supporting hydration.
Sodium hyaluronate: A substance with strong moisturizing properties, supports tissue regeneration and maintains the appropriate level of moisture in the nasal mucosa.
Ectoine: A natural compound with a protective and stabilizing effect that helps protect mucosal cells from environmental stress such as dry air, pollutants and allergens.

Both products can be used to relieve nasal dryness, support the regeneration of the mucous membrane and protect against irritants.

1. SUPPORT FOR PROTECTION AGAINST THE PENETRATION AND SPREAD OF VIRUSES
2. RELIEF OF SYMPTOMS OF VIRAL INFECTION AND SUPPORT OF TREATMENT
3. SHORTENING THE DURATION OF ILLNESS

NASAL GEL SPRAY

Packaging:
Glass bottle: 20 ml with nasal atomizer

GEL SPRAY FOR THE ORAL CAVITY

Packaging:
Glass bottle: 20 ml with oral atomizer

Intended to be used from:
Above 1st year of life.

Scar gel

MDR approved
Shelf life: 36 months

Advanced medical aidused for the treatment of previously healed scars of different origins.
The gel has a smoothing and soothing effect on scar tissue, improves its appearance by softening and evening out the colour, and reducing the discoloration. The product reduces itching and the tangible tension of the skin.

General information and indications for use:
The product is recommended for:
Enhancing the treatment of scars of various origins, including after:

- burns,
- injuries (abrasions, cuts),
- surgeries (C-section),
- surgical treatment.

As the scar's protective layer against rubbing and sunlight

Contains:

Dimeticon
Biogenic Gensil-210L - an innovative compound of active ingredients concealed in one product.
When applied to the skin, this practical silicone elastomer noticeably softens it.

Absorbs quickly.
Does not contain PEG, parabens, detergents (including SLS, SLES).
Non-sticky.
Safe for the skin.
Provides all-day protection.

HPV Mouthwash

MDR approved
Shelf life: 24 months

CE

An innovative medical product in the form of a mouthwash to protect against the penetration of HPV into the host cell. The ingredients responsible for the essential action of the product are PVP and iota-carrageenan.

General information and indications for use:
The product is recommended for:

- thanks to the content of PVP as a physical blockage of the virus,
- protection for the oropharyngeal areas as a measure for people at high risk of exposure of the mouth and respiratory tract to pathogens, including HPV,
- preventing the spread of the respiratory virus,
- thanks to the content of iota-carrageenan to reduce recurrence after interventions, e.g. HPV-induced warts recurrence after cryotherapy or surgery.

Contains:

PVP polyvinylpyrrolidone - soothing, anti-inflammatory, protective by creating a coating / film on the mucosa at the site of application.
Carragenan - Iota Carragenan moisturizes, soothes, protects by creating a coating / film on the mucosa in combination with PVP

Packaging:

Bottle: 225 ml

HPV spray for intimate areas

MDR approved
Shelf life: 24 months

Innovative medical device in the form of spray for intimate areas to protect against HPV penetration into the host cell.
The main ingredients are tannin and iota-carrageenan.
Spray on the intimate area immediately before and after sexual intercourse.

General information and indications for use:

The product is recommended as:

- a physical barrier to the virus, provided by iota-carrageenan,
- a protection for the anal-genital area for people at high risk of exposure of the intimate area to pathogens including HPV,
- a preventive measure (tannin) against the spread of HPV from the intimate area to other areas such as mouth and throat,
- a preventive measure (iota-carrageenan) to reduce recurrence after interventions, e.g. recurrence of warts caused by HPV after cryotherapy or surgery.

Contains:

Zinc oxide, stearic acid and polyglycerol diester, tannic acid, lactic acid, carrageenan

Packaging:

Bottle: 50 ml

Ointment for skin

MDD registration – in transition period
Shelf life: 36 months **UNTIL 12.2028**

CE

The product is intended to be applied on the skin with irritations and nappy rash in infants and young children and for preventive use against nappy rash.
The product is intended to reduce discomfort symptoms accompanying skin lesions in the progress of psoriasis.

General information and indications for use:

- supportive in nappy rash when the clinical picture is characterised by the symptoms of irritant dermatitis such as erythema and oedema but not when skin lesions are present: exudative papules and erosions,
- protective, it creates a subtle film/protective barrier on the skin which secures the skin against moisture (urine, faeces) and irritation,
- soothing, the feeling of burning and itching in nappy rash,
- prevents skin irritations and blister,
- soothing in case of skin changes in the course of psoriatic disease in adults,
- soothing in case of skin changes in the course of psoriatic disease in children and infants only after consultation with a doctor.

Does not contain PEG, parabens, detergents, including: SLS, SLES.
It is safe for skin.
It provides full-day protection.

Contains:

Petroleum jelly - forms a highly hydrophobic hydrocarbon film/protective layer on the skin.
Linseed oil, when combined with petroleum jelly, forms a protective layer on the skin and also soothes burning and itching (due to the presence of fatty acids in its composition).
Softisan - forms a protective layer and has a high water binding capacity. Softisan is particularly recommended for very sensitive skin and has no allergic effect.

Packaging:

Tube: 50 ml, 100 ml

Intended to be used from:
From 1st day of life.
