

CUSTOMIZABLE POWERFUL TOOLS

AURUM Pharmatech, Inc. provides various cheminformatics services for small-mid-sized Pharmaceutical companies. Additionally, we can also develop custom application (web/software) to meet your needs.

❖ ELN –Electronic Lab Notebook

Vendors will keep track of in-house synthesis and protect their intellectual property with our web-based Electronic Laboratory Notebook (ELN). The state-of-art search functions allow vendors to find reactions, chemical structures, and data quickly.

❖ RegMol –Registration & Assay Database

RegMol is a web-based registration database and assay data repository for small molecules, biologics, and conjugates. Some of RegMol's many offerings include a powerful structure and bio-sequence search, batch registration, assay protocol management, and data mining analytics.

❖ Inventory –Inventory System

Its powerful biosequence/structure search, tracking, and location/shipment management allow you to manage your workflow efficiently. Inventory is cross-platform, customizable, and easy to integrate with Electronic Lab Notebook and registration systems.

❖ PMF – Project, Workflow and CRM System

Project Management Framework (PMF) empowers organizations to manage workflow and project timeline effectively. It is an easy-to-deploy collaboration platform with crucial security control, cogent document sharing, and powerful data mining technology (structure and biosequence search).

❖ SDMS –Scientific Data Management System

A web-based repository to manage scientific files from instruments, devices, and other data sources in a centralized and regulated manner. SDMS provides powerful data mining capabilities including search by chemical structures, reactions, biosequences and keywords.

❖ OMS – Order Management System

An order management system (OMS) is an electronic system developed to execute securities orders in an efficient and cost-effective manner. Inbuilt chemical search integration with third parties to manage all procurement related tasks.

- Integration with Accounting Softwares
- Integration with Chemical Search engines
- MSDS, Labels, COA and other doc management

❖ EMS – Email Management / Support System

Email management systems centrally capture emails created and received by employees. Using a classification scheme to manage this content, retention periods and access controls can be applied to manage emails. Metadata associated with the emails can be captured to allow this information to be managed and retrieved.
